**CASE NARRATIVE
VOLATILE ORGANICS BY GC/MS (EPA 8260B)**

Laboratory number: 306574
Client: TRC Solutions Inc.
Project: 285830.02A.01
Location: Riley Soil Investigation
Request Date: 01/18/19
Samples Received: 01/18/19

This data package contains sample and QC results for five water samples, requested for the above referenced project on 01/18/19. See attached cooler receipt form for any sample receipt problems or discrepancies.

Volatile Organics by GC/MS (EPA 8260B):

TB01182019 (lab # 306574-005) was analyzed with more than 1 mL of headspace in the VOA vial.

No other analytical problems were encountered.

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 306574
 Date Received: 1/18/19

Client: TRE
 Project: _____

Section 2: Samples received in a cooler? Yes, how many? 2 No (skip Section 3 below)
 If no cooler Sample Temp (°C): _____ using IR Gun # A, or B
 Samples received on ice directly from the field. Cooling process had begun
 If in cooler: Date Opened 1/18/19 By (print) AC (sign) [Signature]
 Shipping info (if applicable) _____
 Are custody seals present? No, or Yes. If yes, where? on cooler, on samples, on package
 Date: _____ How many _____ Signature, Initials, None
 Were custody seals intact upon arrival? Yes No N/A

Section 3: **Important: Notify PM if temperature exceeds 6°C or arrive frozen.**

Packing in cooler: (if other, describe) _____
 Bubble Wrap, Foam blocks, Bags, None, Cloth material, Cardboard, Styrofoam, Paper towels
 Samples received on ice directly from the field. Cooling process had begun
 Type of ice used: Wet, Blue/Gel, None Temperature blank(s) included? Yes, No
 Temperature measured using Thermometer ID: _____, or IR Gun # A B
 Cooler Temp (°C): #1: 4.2, #2: 4.9, #3: _____, #4: _____, #5: _____, #6: _____, #7: _____

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	/		
Were Method 5035 sampling containers present?			/
If YES, what time were they transferred to freezer?			
Did all bottles arrive unbroken/unopened?	/		
Are there any missing / extra samples?		/	
Are samples in the appropriate containers for indicated tests?	/		
Are sample labels present, in good condition and complete?	/		
Does the container count match the COC?	/		
Do the sample labels agree with custody papers?	/		
Was sufficient amount of sample sent for tests requested?	/		
Did you change the hold time in LIMS for unpreserved VOAs?			/
Did you change the hold time in LIMS for preserved terracores?			/
Are bubbles > 6mm absent in VOA samples?		/	
Was the client contacted concerning this sample delivery?		/	
If YES, who was called? _____ By _____ Date: _____			

Section 5:	YES	NO	N/A
Are the samples appropriately preserved? (if N/A, skip the rest of section 5)			/
Did you check preservatives for all bottles for each sample?			
Did you document your preservative check?			
pH strip lot# _____, pH strip lot# _____, pH strip lot# _____			
Preservative added:			
<input type="checkbox"/> H2SO4 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HCL lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HNO3 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> NaOH lot# _____ added to samples _____ on/at _____			

Section 6: Explanations/Comments: X Sample 5 1/1 VO2's arrived with bubbles

Date Logged In 1/18/19 By (print) AC (sign) [Signature]

MCT 01/08/19 [Freon 12]: Combined split peak in multiple levels.

MCT 01/08/19 [Chloromethane]: Combined split peak in multiple levels.
MCT 01/08/19 [Vinyl Chloride]: Combined split peak in multiple levels.
MCT 01/08/19 [Chloroethane]: Combined split peak in multiple levels.
MCT 01/08/19 [Vinyl Acetate]: Corrected automatically drawn baseline in multiple levels.
MCT 01/08/19 [1,2-Dichloropropane]: Separated from coeluting peak in multiple levels.
MCT 01/08/19 [1,2,3-Trichloropropane]: Separated from coeluting peak in multiple levels.
MCT 01/08/19 [Bromomethane]: ICV failed high.
MCT 01/08/19 [Acetone]: ICV failed low (-31%)
MCT 01/09/19 [Iodomethane]: Combined split peak in (ja721).

CASE NARRATIVE
SEMIVOLATILE ORGANICS BY GC/MS SIM (EPA 8270C-SIM)

Laboratory number: 306574
Client: TRC Solutions Inc.
Project: 285830.02A.01
Location: Riley Soil Investigation
Request Date: 01/18/19
Samples Received: 01/18/19

This data package contains sample and QC results for four water samples, requested for the above referenced project on 01/18/19. See attached cooler receipt form for any sample receipt problems or discrepancies.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):

No analytical problems were encountered.

Chain of Custody

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 306574
 Date Received: 1/18/19

Client: TRE
 Project: _____

Section 2: Samples received in a cooler? Yes, how many? 2 No (skip Section 3 below)
 If no cooler Sample Temp (°C): _____ using IR Gun # A, or B
 Samples received on ice directly from the field. Cooling process had begun
 If in cooler: Date Opened 1/18/19 By (print) AC (sign) [Signature]
 Shipping info (if applicable) _____
 Are custody seals present? No, or Yes. If yes, where? on cooler, on samples, on package
 Date: _____ How many _____ Signature, Initials, None
 Were custody seals intact upon arrival? Yes No N/A

Section 3: **Important: Notify PM if temperature exceeds 6°C or arrive frozen.**

Packing in cooler: (if other, describe) _____
 Bubble Wrap, Foam blocks, Bags, None, Cloth material, Cardboard, Styrofoam, Paper towels
 Samples received on ice directly from the field. Cooling process had begun
 Type of ice used: Wet, Blue/Gel, None Temperature blank(s) included? Yes, No
 Temperature measured using Thermometer ID: _____, or IR Gun # A B
 Cooler Temp (°C): #1: 4.2, #2: 4.9, #3: _____, #4: _____, #5: _____, #6: _____, #7: _____

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	/		
Were Method 5035 sampling containers present?			/
If YES, what time were they transferred to freezer?			
Did all bottles arrive unbroken/unopened?	/		
Are there any missing / extra samples?		/	
Are samples in the appropriate containers for indicated tests?	/		
Are sample labels present, in good condition and complete?	/		
Does the container count match the COC?	/		
Do the sample labels agree with custody papers?	/		
Was sufficient amount of sample sent for tests requested?	/		
Did you change the hold time in LIMS for unpreserved VOAs?			/
Did you change the hold time in LIMS for preserved terracores?			/
Are bubbles > 6mm absent in VOA samples?		/	
Was the client contacted concerning this sample delivery?		/	
If YES, who was called? _____ By _____ Date: _____			

Section 5:	YES	NO	N/A
Are the samples appropriately preserved? (if N/A, skip the rest of section 5)			/
Did you check preservatives for all bottles for each sample?			
Did you document your preservative check?			
pH strip lot# _____, pH strip lot# _____, pH strip lot# _____			
Preservative added:			
<input type="checkbox"/> H2SO4 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HCL lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HNO3 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> NaOH lot# _____ added to samples _____ on/at _____			

Section 6: Explanations/Comments: X Sample 5 1/1 VO2's arrived with bubbles

Date Logged In 1/18/19 By (print) AC (sign) [Signature]

MS/MSD not included due to: insufficient volume, or other (reason)

checked sample pH using pH strips - lot # MHC 547770
1.0 mL of surrogate solution was added to all samples
1.0 mL of matrix spiking solution was added to all spikes
 pH of all samples adjusted to pH ≤ 2 (low pH strip lot# MHC 547770) with H₂SO₄
 Cont. L/L extracted with 450mL of CH₂Cl₂
 Extraction Start Time: 14:58 / 13:20 / 18:10
 Extraction End Time: 08:58 / 07:20 / 12:10
 pH of all samples adjusted to pH ≥ 11 (high pH strip lot # NA) with 10 N NaOH
 Extraction Start Time: I
 Extraction End Time: I
 Extracts filtered through baked, CH₂Cl₂-rinsed granular Na₂SO₄
 Concentrated to final volume at temperature (degrees C) 70
 Using thermometer(s) # SN 4155681
 Relinquished to BNA department

YW1 01/24/19 [1,4-Dioxane]: Corrected automatically drawn baseline for spike & dup. [general version]

LW 02/04/19 : 5% failure is Dibenz(a,h)anthracene at 43% recovery in the BS with a lower limit of 47%. BSD passed at 47% and the RPD is 8.

5% spike rule

**CASE NARRATIVE
WET CHEMISTRY (SM2540C)**

Laboratory number: 306574
Client: TRC Solutions Inc.
Project: 285830.02A.01
Location: Riley Soil Investigation
Request Date: 01/18/19
Samples Received: 01/18/19

This data package contains sample and QC results for four water samples, requested for the above referenced project on 01/18/19. See attached cooler receipt form for any sample receipt problems or discrepancies.

Total Dissolved Solids (TDS) (SM2540C):
No analytical problems were encountered.

Chain of Custody

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 306574
Date Received: 1/18/19

Client: TRC
Project: _____

Section 2: Samples received in a cooler? Yes, how many? 2 No (skip Section 3 below)
If no cooler Sample Temp (°C): _____ using IR Gun # A, or B
 Samples received on ice directly from the field. Cooling process had begun
If in cooler: Date Opened 1/18/19 By (print) AC (sign) _____
Shipping info (if applicable) _____
Are custody seals present? No, or Yes. If yes, where? on cooler, on samples, on package
 Date: _____ How many _____ Signature, Initials, None
Were custody seals intact upon arrival? Yes No N/A

Section 3: **Important: Notify PM if temperature exceeds 6°C or arrive frozen.**

Packing in cooler: (if other, describe) _____
 Bubble Wrap, Foam blocks, Bags, None, Cloth material, Cardboard, Styrofoam, Paper towels
 Samples received on ice directly from the field. Cooling process had begun
Type of ice used: Wet, Blue/Gel, None Temperature blank(s) included? Yes, No
Temperature measured using Thermometer ID: _____, or IR Gun # A B
Cooler Temp (°C): #1: 4.2, #2: 4.9, #3: _____, #4: _____, #5: _____, #6: _____, #7: _____

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	/		
Were Method 5035 sampling containers present?			/
If YES, what time were they transferred to freezer?			
Did all bottles arrive unbroken/unopened?	/		
Are there any missing / extra samples?		/	
Are samples in the appropriate containers for indicated tests?	/		
Are sample labels present, in good condition and complete?	/		
Does the container count match the COC?	/		
Do the sample labels agree with custody papers?	/		
Was sufficient amount of sample sent for tests requested?	/		
Did you change the hold time in LIMS for unpreserved VOAs?			/
Did you change the hold time in LIMS for preserved terracores?			/
Are bubbles > 6mm absent in VOA samples?		/	
Was the client contacted concerning this sample delivery?		/	
If YES, who was called? _____ By _____ Date: _____			

Section 5:	YES	NO	N/A
Are the samples appropriately preserved? (if N/A, skip the rest of section 5)			/
Did you check preservatives for all bottles for each sample?			
Did you document your preservative check?			
pH strip lot# _____, pH strip lot# _____, pH strip lot# _____			
Preservative added:			
<input type="checkbox"/> H2SO4 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HCL lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HNO3 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> NaOH lot# _____ added to samples _____ on/at _____			

Section 6: Explanations/Comments: X Sample 5 1/1 VO2's arrived with bubbles

Date Logged In 1/18/19 By (print) AC (sign) _____
Date Labeled 1/19/19 By (print) AC (sign) _____

CASE NARRATIVE
TPH-PURGEABLES AND/OR BTXE BY GC (EPA 8015B AND EPA 8021B)

Laboratory number: 309066
Client: TRC Solutions Inc.
Project: 285830.02A.01
Location: Riley Soil Investigation
Request Date: 04/18/19
Samples Received: 04/18/19

This data package contains sample and QC results for five water samples, requested for the above referenced project on 04/18/19. See attached cooler receipt form for any sample receipt problems or discrepancies.

TPH-Purgeables and/or BTXE by GC (EPA 8015B and EPA 8021B):

TB04182019-01 (lab # 309066-005) was analyzed with more than 1 mL of headspace in the VOA vial.

No other analytical problems were encountered.

Chain of Custody

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 309006 Client: TRC
 Date Received: 4/18/19 Project: _____

Section 2: Samples received in a cooler? Yes, how many? 2 No (skip Section 3 below)
 If no cooler Sample Temp (°C): _____ using IR Gun #. A, or B
 Samples received on ice directly from the field. Cooling process had begun
 If in cooler: Date Opened 4/18/19 By (print) RV (sign) RV
 Shipping info (if applicable) _____
 Are custody seals present? No, or Yes. If yes, where? on cooler, on samples, on package
 Date: _____ How many _____ Signature, Initials, None
 Were custody seals intact upon arrival? Yes No N/A

Section 3: Important : Notify PM if temperature exceeds 6°C or arrive frozen.

Packing in cooler: (if other, describe) _____
 Bubble Wrap, Foam blocks, Bags, None, Cloth material, Cardboard, Styrofoam, Paper towels
 Samples received on ice directly from the field. Cooling process had begun
 Type of ice used : Wet, Blue/Gel, None Temperature blank(s) included? Yes, No
 Temperature measured using Thermometer ID: _____, or IR Gun # A B
 Cooler Temp (°C): #1: 3.8, #2: 2.1, #3: _____, #4: _____, #5: _____, #6: _____, #7: _____

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	/		
Were Method 5035 sampling containers present?		/	
If YES, what time were they transferred to freezer?			
Did all bottles arrive unbroken/unopened?	/		
Are there any missing / extra samples?		/	
Are samples in the appropriate containers for indicated tests?	/		
Are sample labels present, in good condition and complete?	/		
Does the container count match the COC?	/		
Do the sample labels agree with custody papers?	/		
Was sufficient amount of sample sent for tests requested?	/		
Did you change the hold time in LIMS for unpreserved VOAs?			/
Did you change the hold time in LIMS for preserved terracores?			/
Are bubbles > 6mm absent in VOA samples?			/
Was the client contacted concerning this sample delivery?			/
If YES, who was called? _____ By _____ Date: _____			/

Section 5:	YES	NO	N/A
Are the samples appropriately preserved? (if N/A, skip the rest of section 5)			/
Did you check preservatives for all bottles for each sample?			/
Did you document your preservative check? pH strip lot# _____, pH strip lot# _____, pH strip lot# _____			/
Preservative added:			
<input type="checkbox"/> H2SO4 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HCL lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HNO3 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> NaOH lot# _____ added to samples _____ on/at _____			

Section 6:
 Explanations/Comments: 1/2 VOAS arrived w/ bubbles for Sample "005"

Date Logged in 4/18/19 By (print) RV (sign) RV
 Date Labeled 4-18-19 By (print) RV (sign) RV

**CASE NARRATIVE
TPH-EXTRACTABLES BY GC (EPA 8015B)**

Laboratory number: **309066**
Client: **TRC Solutions Inc.**
Project: **285830.02A.01**
Location: **Riley Soil Investigation**
Request Date: **04/18/19**
Samples Received: **04/18/19**

This data package contains sample and QC results for four water samples, requested for the above referenced project on 04/18/19. See attached cooler receipt form for any sample receipt problems or discrepancies.

TPH-Extractables by GC (EPA 8015B):

No analytical problems were encountered.

Chain of Custody

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 309006 Client: TRC
 Date Received: 4/18/19 Project: _____

Section 2: Samples received in a cooler? Yes, how many? 2 No (skip Section 3 below)
 If no cooler Sample Temp (°C): _____ using IR Gun #. A, or B
 Samples received on ice directly from the field. Cooling process had begun
 If in cooler: Date Opened 4/18/19 By (print) RV (sign) RV
 Shipping info (if applicable) _____
 Are custody seals present? No, or Yes. If yes, where? on cooler, on samples, on package
 Date: _____ How many _____ Signature, Initials, None
 Were custody seals intact upon arrival? Yes No N/A

Section 3: **Important : Notify PM if temperature exceeds 6°C or arrive frozen.**
 Packing in cooler: (if other, describe) _____
 Bubble Wrap, Foam blocks, Bags, None, Cloth material, Cardboard, Styrofoam, Paper towels
 Samples received on ice directly from the field. Cooling process had begun
 Type of ice used : Wet, Blue/Gel, None Temperature blank(s) included? Yes, No
 Temperature measured using Thermometer ID: _____, or IR Gun # A B
 Cooler Temp (°C): #1: 3.8, #2: 2.1, #3: _____, #4: _____, #5: _____, #6: _____, #7: _____

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	/		
Were Method 5035 sampling containers present?		/	
If YES, what time were they transferred to freezer? _____			
Did all bottles arrive unbroken/unopened?	/		
Are there any missing / extra samples?		/	
Are samples in the appropriate containers for indicated tests?	/		
Are sample labels present, in good condition and complete?	/		
Does the container count match the COC?	/		
Do the sample labels agree with custody papers?	/		
Was sufficient amount of sample sent for tests requested?	/		
Did you change the hold time in LIMS for unpreserved VOAs?			/
Did you change the hold time in LIMS for preserved terracores?			/
Are bubbles > 6mm absent in VOA samples?			/
Was the client contacted concerning this sample delivery?			/
If YES, who was called? _____ By _____ Date: _____			/

Section 5:

	YES	NO	N/A
Are the samples appropriately preserved? (if N/A, skip the rest of section 5)			/
Did you check preservatives for all bottles for each sample?			/
Did you document your preservative check?			/
pH strip lot# _____, pH strip lot# _____, pH strip lot# _____			/
Preservative added:			
<input type="checkbox"/> H2SO4 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HCL lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HNO3 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> NaOH lot# _____ added to samples _____ on/at _____			

Section 6:
 Explanations/Comments: 1/1 VOAS arrived w/ bubbles for Sample "005"

Date Logged in 4/18/19 By (print) RV (sign) RV
 Date Labeled 4-18-19 By (print) RV (sign) RV

TKY 03/25/19 : DCM:EM58320

TKY 03/26/19 : I verified that the vials loaded on the instrument matched the sequence data entry, for runs 1 through 44.

TKY 03/26/19 : Run 084_026 had electrical interference at RT=5.8. RR at run 044.

TEH (8015) Water Prep Log

version 201901

Enthlapy Analytical LLC - Berkeley

LIMS Batch No: 269971
 LIMS Analysis: TEH
 Date Extracted: 4/25/19

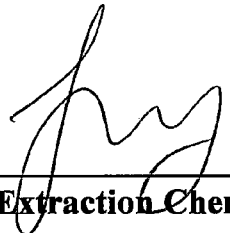

Extraction Method:
 EPA 3520c cont. L/L

Page 24 BK 4398
 Cleanup Method (if needed):
 EPA 3630c Silica Gel

BS/MSD only (MS/MSD not included) due to: insufficient volume, or other (reason)

Checked pH with pH strips - lot # HCS47770 EJL 4/25/19
0.5 mL of TEH_SURR was added to all samples S401866 S40299C
0.5 mL of TEH_SP was added to all spikes S401840 S401498
 3520c: Samples were continually extracted about 450 mL of CH₂Cl₂
 Extraction Start Time: 16:44 / 16:57
 Extraction End Time: 16:45 / 10:47 EJL 4/26/19
 3510c: Samples were extracted 3 times with 60 mL of CH₂Cl₂
 Extracts filtered through baked, CH₂Cl₂-rinsed granular Na₂SO₄ EM58341 TR1 4/26/19
 Concentrated to final volume in boiling water bath 19K2956872 4/22/19
 Relinquished to TEH Department

**CASE NARRATIVE
WET CHEMISTRY (SM2540C)**

Laboratory number: 309066
Client: TRC Solutions Inc.
Project: 285830.02A.01
Location: Riley Soil Investigation
Request Date: 04/18/19
Samples Received: 04/18/19

This data package contains sample and QC results for four water samples, requested for the above referenced project on 04/18/19. See attached cooler receipt form for any sample receipt problems or discrepancies.

Total Dissolved Solids (TDS) (SM2540C):
No analytical problems were encountered.

Chain of Custody

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 309006 Client: TRC
 Date Received: 4/18/19 Project: _____

Section 2: Samples received in a cooler? Yes, how many? 2 No (skip Section 3 below)
 If no cooler Sample Temp (°C): _____ using IR Gun #. A, or B
 Samples received on ice directly from the field. Cooling process had begun
 If in cooler: Date Opened 4/18/19 By (print) RV (sign) RV
 Shipping info (if applicable) _____
 Are custody seals present? No, or Yes. If yes, where? on cooler, on samples, on package
 Date: _____ How many _____ Signature, Initials, None
 Were custody seals intact upon arrival? Yes No N/A

Section 3: **Important : Notify PM if temperature exceeds 6°C or arrive frozen.**
 Packing in cooler: (if other, describe) _____
 Bubble Wrap, Foam blocks, Bags, None, Cloth material, Cardboard, Styrofoam, Paper towels
 Samples received on ice directly from the field. Cooling process had begun
 Type of ice used : Wet, Blue/Gel, None Temperature blank(s) included? Yes, No
 Temperature measured using Thermometer ID: _____, or IR Gun # A B
 Cooler Temp (°C): #1: 3.8, #2: 2.1, #3: _____, #4: _____, #5: _____, #6: _____, #7: _____

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	/		
Were Method 5035 sampling containers present?		/	
If YES, what time were they transferred to freezer? _____			
Did all bottles arrive unbroken/unopened?	/		
Are there any missing / extra samples?		/	
Are samples in the appropriate containers for indicated tests?	/		
Are sample labels present, in good condition and complete?	/		
Does the container count match the COC?	/		
Do the sample labels agree with custody papers?	/		
Was sufficient amount of sample sent for tests requested?	/		
Did you change the hold time in LIMS for unpreserved VOAs?			/
Did you change the hold time in LIMS for preserved terracores?			/
Are bubbles > 6mm absent in VOA samples?			/
Was the client contacted concerning this sample delivery?			/
If YES, who was called? _____ By _____ Date: _____			/

Section 5: YES NO N/A
 Are the samples appropriately preserved? (if N/A, skip the rest of section 5) _____
 Did you check preservatives for all bottles for each sample? _____
 Did you document your preservative check? _____
 pH strip lot# _____, pH strip lot# _____, pH strip lot# _____
 Preservative added:
 H2SO4 lot# _____ added to samples _____ on/at _____
 HCL lot# _____ added to samples _____ on/at _____
 HNO3 lot# _____ added to samples _____ on/at _____
 NaOH lot# _____ added to samples _____ on/at _____

Section 6:
 Explanations/Comments: 1/1 VOAS arrived w/ bubbles for Sample "005"

Date Logged in 4/18/19 By (print) RV (sign) RV
 Date Labeled 4-18-19 By (print) RV (sign) RV

**CASE NARRATIVE
SUBCONTRACTED PRODUCTS (EPA 8270 SIM)**

Laboratory number: 309066
Client: TRC Solutions Inc.
Project: 285830.02A.01
Location: Riley Soil Investigation
Request Date: 04/18/19
Samples Received: 04/18/19

This data package contains sample and QC results for four water samples, requested for the above referenced project on 04/18/19. See attached cooler receipt form for any sample receipt problems or discrepancies.

(EPA 8270 SIM):

Enthalpy Analytical (Orange) in Orange, CA performed the analysis (NELAP certified). Please see the Enthalpy Analytical (Orange) case narrative.

Chain of Custody

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 309006 Client: TRC
 Date Received: 4/18/19 Project: _____

Section 2: Samples received in a cooler? Yes, how many? 2 No (skip Section 3 below)
 If no cooler Sample Temp (°C): _____ using IR Gun #. A, or B
 Samples received on ice directly from the field. Cooling process had begun
 If in cooler: Date Opened 4/18/19 By (print) RV (sign) RV
 Shipping info (if applicable) _____
 Are custody seals present? No, or Yes. If yes, where? on cooler, on samples, on package
 Date: _____ How many _____ Signature, Initials, None
 Were custody seals intact upon arrival? Yes No N/A

Section 3: Important : Notify PM if temperature exceeds 6°C or arrive frozen.

Packing in cooler: (if other, describe) _____
 Bubble Wrap, Foam blocks, Bags, None, Cloth material, Cardboard, Styrofoam, Paper towels
 Samples received on ice directly from the field. Cooling process had begun
 Type of ice used : Wet, Blue/Gel, None Temperature blank(s) included? Yes, No
 Temperature measured using Thermometer ID: _____, or IR Gun # A B
 Cooler Temp (°C): #1: 3.8, #2: 2.1, #3: _____, #4: _____, #5: _____, #6: _____, #7: _____

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	/		
Were Method 5035 sampling containers present?		/	
If YES, what time were they transferred to freezer? _____			
Did all bottles arrive unbroken/unopened?	/		
Are there any missing / extra samples?		/	
Are samples in the appropriate containers for indicated tests?	/		
Are sample labels present, in good condition and complete?	/		
Does the container count match the COC?	/		
Do the sample labels agree with custody papers?	/		
Was sufficient amount of sample sent for tests requested?	/		
Did you change the hold time in LIMS for unpreserved VOAs?			/
Did you change the hold time in LIMS for preserved terracores?			/
Are bubbles > 6mm absent in VOA samples?			/
Was the client contacted concerning this sample delivery?			/
If YES, who was called? _____ By _____ Date: _____			/

Section 5:	YES	NO	N/A
Are the samples appropriately preserved? (if N/A, skip the rest of section 5)			/
Did you check preservatives for all bottles for each sample?			/
Did you document your preservative check? pH strip lot# _____, pH strip lot# _____, pH strip lot# _____			/
Preservative added:			
<input type="checkbox"/> H2SO4 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HCL lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HNO3 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> NaOH lot# _____ added to samples _____ on/at _____			

Section 6:
 Explanations/Comments: 1/1 VOAS arrived w/ bubbles for Sample "005"

Attn: Haley Campbell

Comments: Project Number: 309066
Site: Riley Soil Investigation

5/9/19 Sample extracts were received at 11.0°C.

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

<u>Sample #</u>	<u>Client Sample ID</u>

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
BQ4	Minor Dissolved Oxygen loss was observed in the blank water check, however, the LCS was within criteria, validating the batch.
BQ5	Minor Dissolved Oxygen loss was observed in the blank water check.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
IR	Inconclusive Result. Legionella is present, however, there is possible non-specific agglutination preventing specific identification.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
L2	LCS did not meet recovery criteria, however, the MS and/or MSD met LCS recovery criteria, validating the batch.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1
 Client: EA - Berkeley Project: 309 066
 Date Received: 5/9/19 Sampler's Name Present: Yes No

Section 2
 Sample(s) received in a cooler? Yes, How many? 1 No (skip section 2) Sample Temp (°C) (No Cooler): _____
 Sample Temp (°C), One from each cooler: #1: 11.0 #2: _____ #3: _____ #4: _____
 (Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)
 Shipping Information: _____

Section 3
 Was the cooler packed with: Ice Ice Packs Bubble Wrap Styrofoam
 Paper None Other _____
 Cooler Temp (°C): #1: -0.2 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments
Extract vials. Out of temp range.

Section 6
 For discrepancies, how was the Project Manager notified? Verbal PM Initials: _____ Date/Time: _____
 Email (email sent to/on): LN / 5/9/19
 Project Manager's response: _____

LABEL INSTRUCTIONS:

Do not copy or reprint this label for additional shipments - each package must have a unique barcode.

Step 1: Use the "Print Label" button on this page to print the shipping label on a laser or inkjet printer.

Step 2: Fold this page in half.

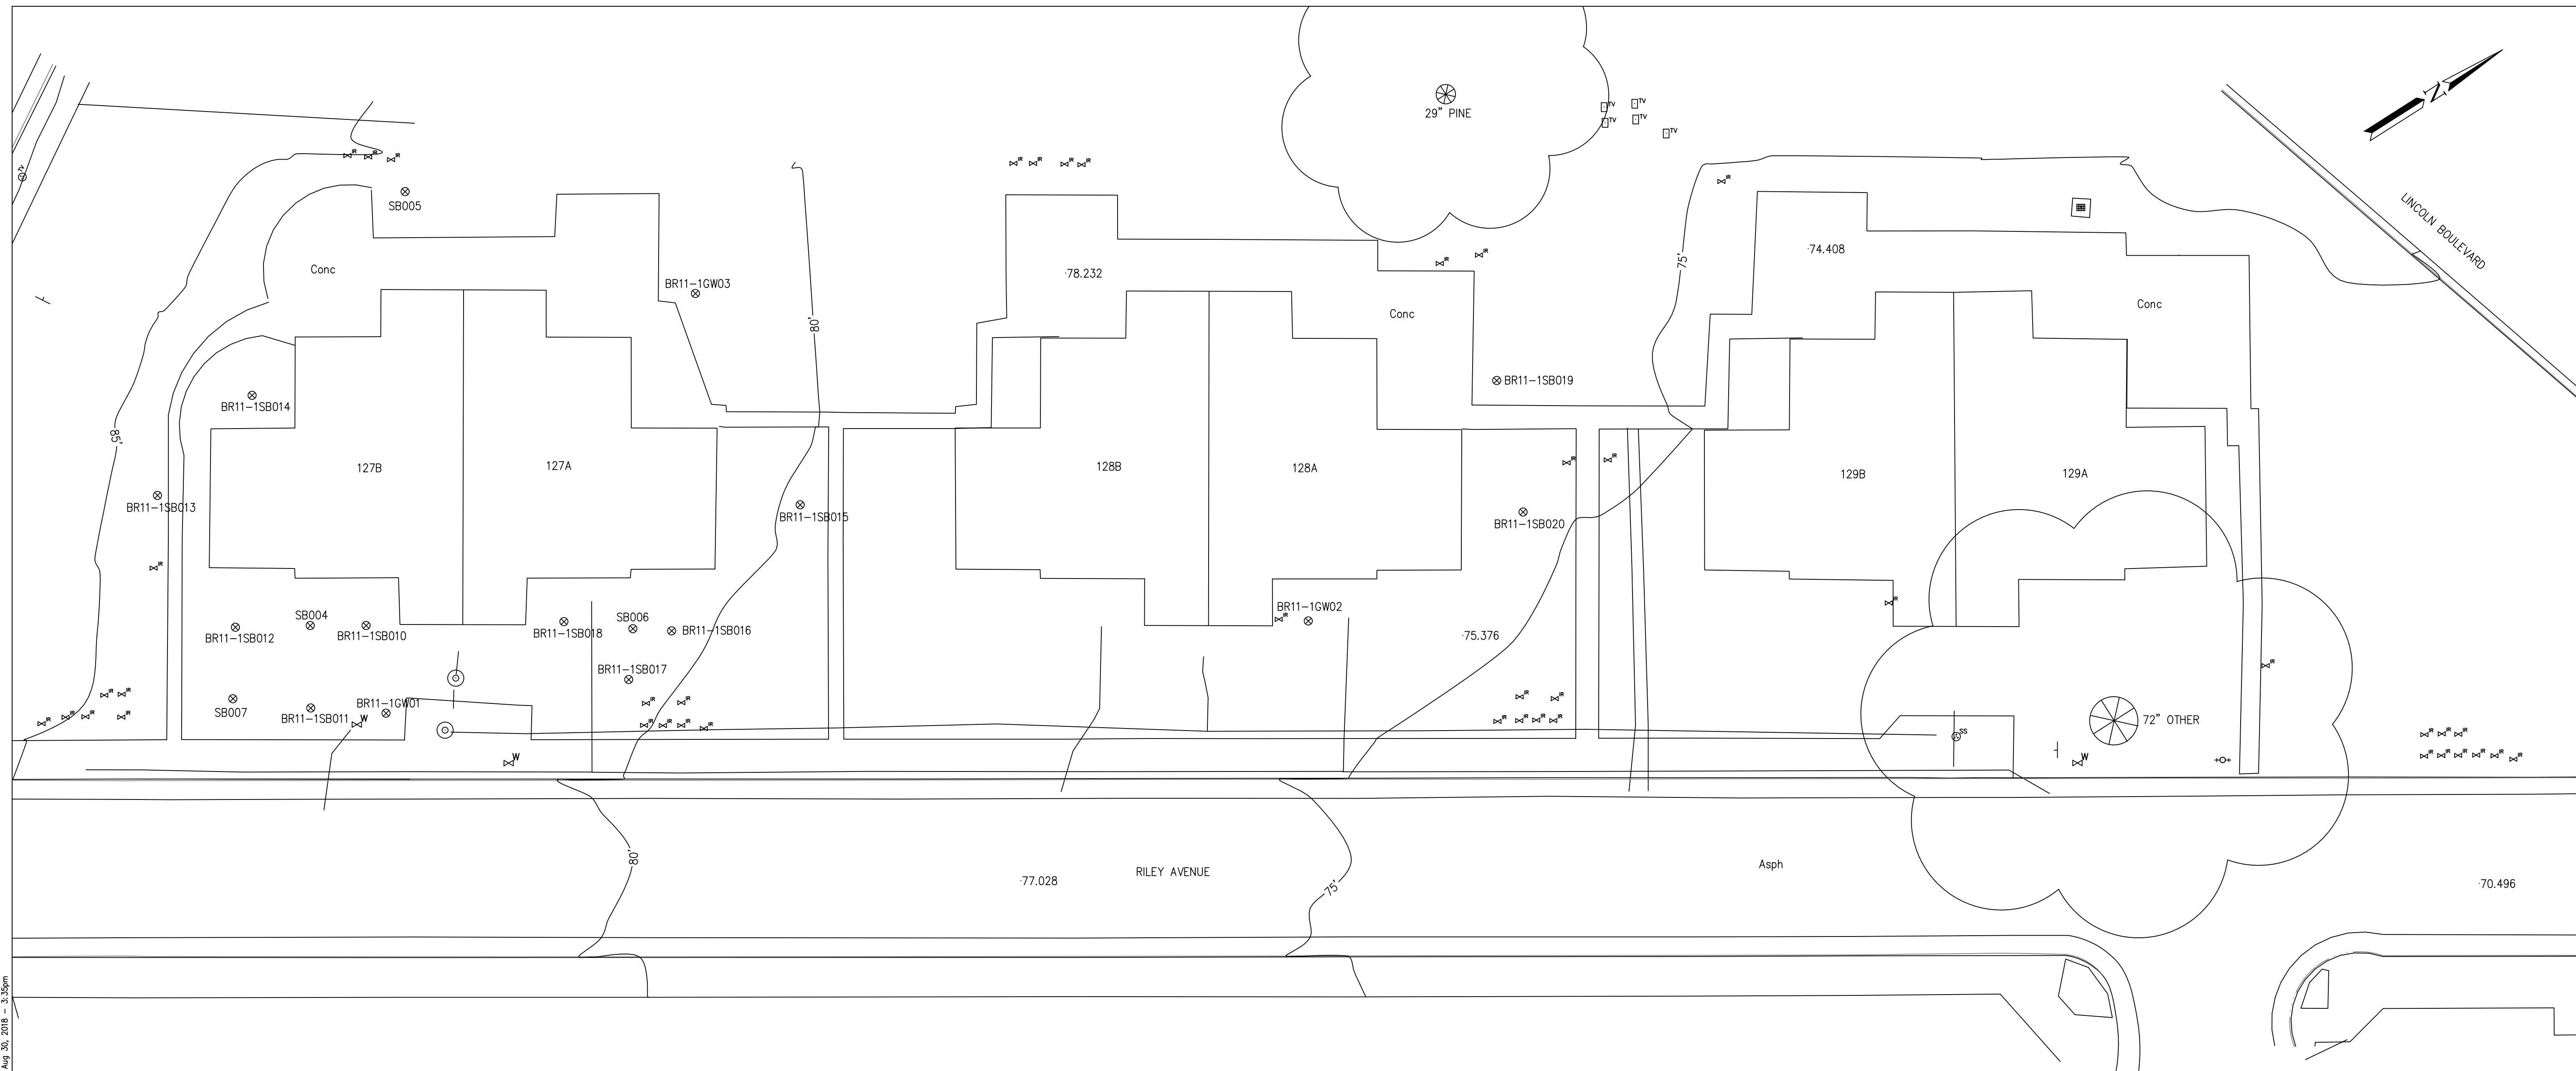

Step 3: Securely attach this label to your package and do not cover the barcode.

TERMS AND CONDITIONS:

By giving us your shipment to deliver, you agree to all of the GSO service terms & conditions including, but not limited to; limits of liability, declared value conditions, and claim procedures which are available on our website at www.gso.com.

Subject: Regional Water Board Review of *Supplemental Site Investigation Report, Fuel Distribution System Section BR11-1, Riley Avenue, dated Nov. 7, 2018*
Presidio of San Francisco

Dear Ms. Larssen:

I reviewed the subject report, which presents the results of the supplemental soil and groundwater investigation at the Riley Avenue Fuel Distribution System (FDS) BR11-1 Site (Site). Based on the review, I have the following comments.

1. **Section 1.1, Site Description** – Please indicate on Figure 2 the known or approximate location of boiler fuel tank BR11-1.
2. **Section 1.3, Conceptual Site Model, third bullet** – The sentence states: “Groundwater data from installed groundwater monitoring wells indicate the direction of groundwater flow is to the northeast.” However, Figure A-6-3 (Groundwater Elevation Map), which can be found on GeoTracker with the closure document for FDS Group 1g/Section BR11-1, shows the flow direction as due north to the San Francisco Bay. Please evaluate Figure A-6-3 and other available groundwater elevation data. Based on the evaluation, please revise the groundwater flow direction as necessary. Please indicate the groundwater flow direction on Figure 4.

The groundwater elevation at monitoring well GW02 (128A front yard) is consistent with the groundwater elevation contours shown on Figure A-6-3. However, the groundwater elevations at boring SB004 (127B front yard) and monitoring wells GW01 (127B front yard) and GW03 (127A back yard) are approximately 30 to 40 feet above the anticipated elevations indicated on Figure A-6-3. Please evaluate and describe whether the groundwater at SB004, GW01, and GW03 is perched above a lower, laterally-continuous groundwater-bearing zone through which are screened well GW02 and the wells used to develop Figure A-6-3.

3. **Section 1.3, Conceptual Site Model, new bullet** – Please add a bullet that summarizes the transport and fate of secondary source groundwater¹ in the front yards of 127A/B. See also the comments on Section 5.2.

¹“Secondary source” is petroleum-impacted soil or groundwater located at or immediately beneath the point of release from the primary source.

4. **Section 2.0, Chemicals of Concern** – Please revise this section to include all chemicals of concern (COCs).
- **Groundwater:** Please indicate that TPH-g, TPH-d, and TPH-mo are actual COCs, based on their concentrations in groundwater at SB004 and the observations of heavy petroleum contamination in the groundwater-bearing zone at boring SB010.
 - **Sub-Slab/Soil Vapor:** TPH-g, TPH-d, and benzene are identified as COCs in soil gas beneath 127A and *potentially* beneath 127B. We believe it is an understatement to indicate that TPH-g, TPH-d, and benzene are “potentially beneath 127B.” Maximum concentrations of gasoline-range total petroleum hydrocarbons (TPH-g), diesel-range TPH (TPH-d), and benzene in sub-slab/soil gas beneath adjacent 127A were 190,000 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$), 39,000 $\mu\text{g}/\text{m}^3$, and 21 $\mu\text{g}/\text{m}^3$, respectively. Because the extent and magnitude of soil contamination beneath and in the front yard of adjacent 127B are greater than at 127A, it follows that it is quite likely that TPH-g, TPH-d, and benzene are COCs in the sub-slab/soil gas beneath 127B. Please revise the bullet to reflect likely soil vapor conditions beneath 127B.
- Additionally, please add methane as a COC in sub-slab/soil gas because it has been detected beneath the slab of 127A at a concentration of up to 2.01% by volume, or 40% of the lower explosive limit (LEL) of 5% by volume. Typically, response actions are triggered if methane is present at 10 to 20% of the LEL.
5. **Section 5.1, Soil Impact Delineation, first bullet (Unit 127A)** – The report should be revised to add:
- Cross-section(s) to illustrate the distribution of TPH-d contamination beneath and in the front yard of 127A.
6. **Section 5.1, Soil Impact Delineation, second bullet (Unit 127B)** – The report should be revised to address the following:
- The lateral extent of TPH-d in soil above the Tier 1 ESL includes borings 127BEX102 (west) and 127BEX115 (north). The dashed approximate extent of TPH-d soil contamination shown on Figure 3A should be redrawn to include these borings.
 - Cross-section(s) should be developed to illustrate the distribution of TPH-d contamination beneath and in the front yard of 127B. The cross-section(s) should assist the feasibility evaluation of contaminated soil cleanup.
 - Given the high TPH-d concentrations in soil of the front yard of 127B, up to 18,000 mg/kg at boring SB010 (5 feet below ground surface [bgs]), please provide a technical justification for concluding that “soil contamination [in the front yard] does not appear to be mobile ...”
7. **Section 5.2, Groundwater Delineation** – TPH-g, TPH-d, and motor oil-range TPH (TPH-mo) concentrations in groundwater at SB004 in 127B’s front yard were 1,900 $\mu\text{g}/\text{L}$, 170,000 $\mu\text{g}/\text{L}$, and 13,000 $\mu\text{g}/\text{L}$, respectively. Although groundwater samples were not collected from nearby boring SB010, review of its boring log indicates heavy petroleum contamination from 18 to 31 feet bgs in saturated sand. The boring log describes “brownish liquid bubbles,” “light brownish liquid,” and “product suspected.”

Down-gradient of SB004/SB010, TPH-contaminated groundwater appears to be bounded by borings SB015 (127A side yard) and SB017 (127A front yard) and monitoring well GW03 (127A

backyard). However, SB015 and SB017 were not extended to bedrock. Because the borings were not extended to bedrock, TPH-contaminated groundwater may travel within the upper, weathered bedrock beneath the total depth of SB017 and SB015.

Please provide an acceptable technical justification for concluding that “groundwater beneath the Site has not been significantly affected ... beyond the localized impacts [in the front yard] of Building 127B [i.e. beyond SB004 and SB010].” The justification should address the possibility that perched, secondary source groundwater at SB004/SB010 may travel to the edge of an underlying low-permeability layer, migrate down through the vadose zone to the sand-bedrock interface, and thence down-gradient along the north-sloping interface.

The extent(s) of groundwater contamination should be indicated on Figure 4. If the down-gradient extent of TPH-contaminated groundwater cannot be acceptably delineated, then the report must propose additional investigation to do so.

Responses to our comments on this section should inform revision of the Section 1.3, Site Conceptual Model (additional bullet summarizing the transport and fate of secondary source groundwater).

8. **Section 6.0, Conclusions and Recommendations** – This section should be revised to be consistent with preceding revisions to the report. Also, the second paragraph should be revised to describe that the proposed remedial action to address contamination has not been determined. Rather, as a next step, a feasibility evaluation will be performed to analyze remedial action alternatives, using standard environmental industry practices.

If you have any questions, please contact me at 510.622.2375 or jeff.white@waterboards.ca.gov.

Sincerely,

Jeff White

Subject: DRAFT Response to Comments on Section BR11-1 Supplemental Site
Investigation Report
Fuel Distribution System, Section BR11-1
Riley Avenue
Presidio of San Francisco, San Francisco, California

Dear Mr. White:

Enclosed is the draft response to comments (Draft RTCs) addressing comments on your review of the *Section BR11-1 Supplemental Site Investigation Report* prepared by TRC Solutions, Inc., on behalf of the Presidio Trust (Trust). The RTCs address RWQCB's written comments dated January 3, 2019. The Trust request RWQCB review of the Draft RTCs and attachment prior to implementation in a revised report. Upon approval of the RTCs and document revisions, the Trust will finalize the revised report and submit to the RWQCB for formal approval.

Should you have questions or need additional information, please contact me at (415) 561-5421.

Sincerely,

Nina Larssen
Remediation Program Manager

**Subject: Response to Comments
January 3, 2019 Regional Water Quality Control Board Review of Supplemental Site Investigation Report, Fuel Distribution System Section BR11-1, Riley Avenue, dated Nov. 7, 2018
Presidio of San Francisco**

Dear Mr. White:

On behalf of the Presidio Trust, TRC presents the following responses to your comments dated January 3, 2019 on the Supplemental Site Investigation Report, Fuel Distribution System Section BR11-1, Riley Avenue, dated Nov. 7, 2018. Each of your comments is presented below in italics, followed by our response. Figures and tables are attached.

1. *Section 1.1, Site Description – Please indicate on Figure 2 the known or approximate location of boiler fuel tank BR11-1.*

Approximate location of Tank 127 and the report reference are added to revised Figure 2 (attached). The only known reference to the approximate location of Tank 127 is found in the Presidio Trust's "Request for No Further Action (NFA), Priority 8 Tanks, Submittal No. 1, Presidio of San Francisco", dated September 13, 2010, as follows:

Based on an interview cited in WES (1990), a single 1,500-gallon Bunker Oil UST was removed from the vicinity of Building 127 in 1978. According to a follow-up inspection conducted by MW [Montgomery Watson] in 1992, "a depression was found in the lawn south of Building 127 that may represent settlement into the tank removal pit." No other documentation was found for the UST in archives or elsewhere."

2. *Section 1.3, Conceptual Site Model, third bullet – The sentence states: "Groundwater data from installed groundwater monitoring wells indicate the direction of groundwater flow is to the northeast." However, Figure A-6-3 (Groundwater Elevation Map), which can be found on GeoTracker with the closure document for FDS Group 1g/Section BR11-1, shows the flow direction as due north to the San Francisco Bay. Please evaluate Figure A-6-3 and other available groundwater elevation data. Based on*

the evaluation, please revise the groundwater flow direction as necessary. Please indicate the groundwater flow direction on Figure 4.

The groundwater elevation at monitoring well GW02 (128A front yard) is consistent with the groundwater elevation contours shown on Figure A-6-3.¹ However, the groundwater elevations at boring SB004 (127B front yard) and monitoring wells GW01 (127B front yard) and GW03 (127A back yard) are approximately 30 to 40 feet above the anticipated elevations indicated on Figure A-6-3. Please evaluate and describe whether the groundwater at SB004, GW01, and GW03 is perched above a lower, laterally-continuous groundwater-bearing zone through which are screened well GW02 and the wells used to develop Figure A-6-3.

Based on your comments, TRC evaluated the groundwater hydrogeology beneath the site in more detail. To assist in interpretation of groundwater hydrogeology, geologic cross-sections were prepared and are presented on Figures F-1 through F-3 attached.

REGIONAL GEOLOGY AND HYDROGEOLOGY

TRC concurs with your assessment that the regional groundwater flow is northward towards San Francisco Bay consistent with Figure A-6-3 that you referenced, and with the Presidio-wide conceptual model described in *Draft Basewide Groundwater Monitoring Plan* by Montgomery Watson (MW) 1996.² Based on Google Earth imagery, the San Francisco Bay is located approximately 1,600 feet north of Building 127. Figure 4 has been revised to show the groundwater flow arrow directed northward towards the Bay.

Figure F-1 presents the locations for geologic cross-sections A-A' and B-B', presented on Figures F-2 and F-3 respectively. The site is underlain by relatively impermeable weathered Franciscan bedrock. Shallow bedrock was encountered near SB0004 at depths ranging from 25 fbg at SB014, 34.5 fbg at SB010, and 43.5 fbg at GW01. The Franciscan bedrock dips northward, and was not encountered in borings GW02, SB015, and SB020 advanced further downgradient, to the northeast of Building 127. Bedrock was encountered at 38 fbg at GW03, located due north of Building 127.

Above the bedrock are slope debris and ravine fill and/or the Colma Foundation, which consists of well bedded, fine to medium-grained sand with moderate amounts of detrital silt and clay. According to Montgomery Watson (1996):

“In areas where the water table is below the top of bedrock, perched groundwater is locally present just above the Franciscan bedrock Pleistocene contact. The thickness of the perched zone probably varies both seasonally and with the elevation and slope of the contact. The perched zone is generally relatively thin or absent during the summer in areas where the bedrock is relatively high and/or the Pleistocene contact is steep. Wells screened at the bottom of the late Pleistocene sediments in such areas could locally produce groundwater out of the perched zone; but it is unlikely that significant groundwater yield could be sustained for a significant period of time.”

¹ California Regional Water Quality Control Board (RWQCB). 2009. *No Further Action, Fuel Distribution System, FDS Closure Certification Report Phase I, Presidio of San Francisco, San Francisco County, Water Board Case No. 38D9327*. September 16.

² Montgomery Watson (MW). 1996. *Draft Basewide Groundwater Monitoring Plan, Presidio of San Francisco, California*. July.

Based on our further review of regional and local hydrogeology, shallow groundwater in the vicinity of Building 127 is correlated with shallow bedrock and likely constitutes localized perched groundwater on top of bedrock.

3. Section 1.3, Conceptual Site Model, new bullet – Please add a bullet that summarizes the transport and fate of secondary source groundwater¹ in the front yards of 127A/B. See also the comments on Section 5.2.

The primary source of contamination at this site is the historic fuel oil leak from Fuel Distribution System (FDS) Section BR11-1. The FDS pipelines were removed in 1997³, or more than 20 years ago. The secondary source of contamination is leaked fuel oil into the vadose zone, as discussed further in the response to Comment 5. Potential migration pathways include the following:

- Vapor migration through the soil;
- Free product migration through the vadose zone to groundwater, and subsequent dissolution of petroleum products into groundwater; and
- Dissolution of petroleum product constituents, located in the vadose zone, into percolating rainwater with seepage into the local or regional groundwater.

Based on TPH observed in soil and groundwater sample results, the groundwater impacts at SB004, and potentially also at nearby boring SB010, are limited in extent and constitute weathered hydrocarbons from a fuel line release that occurred more than 20 years ago. See updated Figure 4 attached. We draw this conclusion because TPH has not been detected in well GW01, located approximately 15 feet away from SB004. TPH-d has been detected inconsistently in downgradient wells, but below the MCL priority, and with silica gel cleanup is below detection limits. These results suggest that any residual soil impacts that remain in the vicinity of SB004 do not currently constitute a secondary source to groundwater.

As mentioned above, and shown on cross-sections F-2 and F-3 the shallow groundwater that is present in the vicinity of SB004 and nearby GW-01 likely constitutes a localized perched zone sitting on top of shallow bedrock. This perched groundwater is not likely hydraulically connected to the deeper groundwater zone encountered at GW02. Similarly, groundwater at well GW-03, and observed in nearby borings SB017 and SB015 also may be perched on a lower bedrock surface, also not connected to the regional aquifer. These shelves of perched water (as measured in July) likely vary in size seasonally and year to year based on the amount of annual rainfall. Any excess water in these zones drains to the regional aquifer measured at GW-02.

Based on this hydrogeological conceptual site model, the three monitoring wells are appropriately screened to monitor the permeable zones that overlie the weathered bedrock.

See also response to Comment 7.

4. Section 2.0, Chemicals of Concern – Please revise this section to include all chemicals of concern (COCs).

³ Presidio Trust. 2006. *Fuel Distribution System, FDS Closure Certification Report – Phase I, Presidio of San Francisco, California, REQUEST FOR CLOSURE CERTIFICATION*. January 27.

• **Groundwater:** Please indicate that TPH-g, TPH-d, and TPH-mo are actual COCs, based on their concentrations in groundwater at SB004 and the observations of heavy petroleum contamination in the groundwater-bearing zone at boring SB010.

Comment noted. The revised report will include all COCs.

• **Sub-Slab/Soil Vapor:** TPH-g, TPH-d, and benzene are identified as COCs in soil gas beneath 127A and potentially beneath 127B.

We believe it is an understatement to indicate that TPH-g, TPH-d, and benzene are “potentially beneath 127B.” Maximum concentrations of gasoline-range total petroleum hydrocarbons (TPH-g), diesel-range TPH (TPH-d), and benzene in sub-slab/soil gas beneath adjacent 127A were 190,000 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$), 39,000 $\mu\text{g}/\text{m}^3$, and 21 $\mu\text{g}/\text{m}^3$, respectively. Because the extent and magnitude of soil contamination beneath and in the front yard of adjacent 127B are greater than at 127A, it follows that it is quite likely that TPH-g, TPH-d, and benzene are COCs in the sub-slab/soil gas beneath 127B. Please revise the bullet to reflect likely soil vapor conditions beneath 127B.

Additionally, please add methane as a COC in sub-slab/soil gas because it has been detected beneath the slab of 127A at a concentration of up to 2.01% by volume, or 40% of the lower explosive limit (LEL) of 5% by volume. Typically, response actions are triggered if methane is present at 10 to 20% of the LEL.

Comments noted. The revised report will remove the word “potentially” with respect to COCs beneath 127B. Methane will also be added as a COC.

5. **Section 5.1, Soil Impact Delineation, first bullet (Unit 127A)** – The report should be revised to add: Cross-section(s) to illustrate the distribution of TPH-d contamination beneath and in the front yard of 127A

Comment noted. Cross-sections will be included in the revised report as new Attachment F. See Figures F-1, F-2 and F-3.

6. **Section 5.1, Soil Impact Delineation, second bullet (Unit 127B)** – The report should be revised to address the following:

- The lateral extent of TPH-d in soil above the Tier 1 ESL includes borings 127BEX102 (west) and 127BEX115 (north). The dashed approximate extent of TPH-d soil contamination shown on Figure 3A should be redrawn to include these borings.
- Cross-section(s) should be developed to illustrate the distribution of TPH-d contamination beneath and in the front yard of 127B. The cross-section(s) should assist the feasibility evaluation of contaminated soil cleanup.
- Given the high TPH-d concentrations in soil of the front yard of 127B, up to 18,000 mg/kg at boring SB010 (5 feet below ground surface [bgs]), please provide a technical justification for concluding that “soil contamination [in the front yard] does not appear to be mobile ...”

Figure 3a (attached) is updated as requested to include lateral extent of contamination to include boring 127BEX115 and 127BEX102 to the west. See also response to Comment 7.

7. **Section 5.2, Groundwater Delineation** – TPH-g, TPH-d, and motor oil-range TPH (TPH-mo) concentrations in groundwater at SB004 in 127B's front yard were 1,900 µg/L, 170,000 µg/L, and 13,000 µg/L, respectively. Although groundwater samples were not collected from nearby boring SB010, review of its boring log indicates heavy petroleum contamination from 18 to 31 feet bgs in saturated sand. The boring log describes "brownish liquid bubbles," "light brownish liquid," and "product suspected."

Down-gradient of SB004/SB010, TPH-contaminated groundwater appears to be bounded by borings SB015 (127A side yard) and SB017 (127A front yard) and monitoring well GW03 (127A backyard). However, SB015 and SB017 were not extended to bedrock. Because the borings were not extended to bedrock, TPH-contaminated groundwater may travel within the upper, weathered bedrock beneath the total depth of SB017 and SB015.

Please provide an acceptable technical justification for concluding that "groundwater beneath the Site has not been significantly affected ... beyond the localized impacts [in the front yard] of Building 127B [i.e. beyond SB004 and SB010]." The justification should address the possibility that perched, secondary source groundwater at SB004/SB010 may travel to the edge of an underlying low-permeability layer, migrate down through the vadose zone to the sand- bedrock interface, and thence down-gradient along the north-sloping interface.

The extent(s) of groundwater contamination should be indicated on Figure 4. If the down-gradient extent of TPH-contaminated groundwater cannot be acceptably delineated, then the report must propose additional investigation to do so.

Responses to our comments on this section should inform revision of the Section 1.3, Site Conceptual Model (additional bullet summarizing the transport and fate of secondary source groundwater).

As mentioned previously, the first encountered groundwater in the vicinity of SB004 and adjacent monitoring well GW01 likely represents a localized zone of perched groundwater at approximately 23 to 27 fbg, atop shallow bedrock. Borings 20 to 25 feet east and southeast (SB013 and SB014) of SB004 did not encounter perched groundwater. Likewise, borings performed on the north side of Building 127 did not encounter groundwater until approximately 34 fbg at GW03 and approximately 41 fbg at SB015 and SB017. This suggests that the perched groundwater near SB004 is limited in extent. These observations support the conclusion that residual TPH observed at SB004 are not mobile.

TPH-contaminated groundwater is not likely to travel within the upper, weathered bedrock beneath the total depth of SB017 and SB015 because significant TPH impacts are not observed at well GW03, which is screened across the contact with the Franciscan Complex bedrock. Well GW03 is located due north of SB004, in the direction of the regional groundwater flow. Furthermore, the weathered bedrock that was encountered in borings SB010, SB012, and SB013, and wells GW01 and GW03 contained low permeability clays within the fractures, which is not conducive to groundwater flow.

TPH has not been detected in well GW01, located approximately 15 feet away from SB004, above laboratory reporting limits. TPH-d has been detected inconsistently in downgradient wells, but below the MCL priority level, and below detection limits with silica gel cleanup. Based on the guidance in the 2012 LUFT Manual⁴

⁴ California State Water Resource Control Board. 2012. *Leaking Underground Fuel Tank Guidance Manual*. September.

(CSWRCB, 2012), petroleum plumes should be monitored using this method due to potential interferences by biogenic petroleum in groundwater resources. These results suggest that any residual soil impacts remaining in the vicinity of SB004 do not currently constitute a secondary source to groundwater.

Although TPH-d was detected inconsistently in samples from downgradient well GW03 and boring SB017, concentrations (without silica gel cleanup) do not exceed the MCL Priority of 200 µg/L or the fresh water or saltwater aquatic habitat ESL of 640 µg/L. Therefore, the plume is limited in extent and does not pose a threat to San Francisco Bay, located over 1,600 feet to the north. Furthermore, free product has not been detected in any of the wells.

You noted a potential contaminant transport pathway for perched, secondary source groundwater at SB004/SB010 where TPH-impacted groundwater travels to the edge of an underlying low-permeability layer, migrates down through the vadose zone to the sand- bedrock interface, and thence down-gradient along the north-sloping interface. This potential contaminant transport pathway does not appear to be complete because significant TPH impacts have not been detected in downgradient wells GW02 and GW03, both screened downslope along the north-sloping bedrock interface.

While we concur with you that there may be localized groundwater impacts near SB004 and SB010, note that the SB004 boring was terminated (due to equipment limitations) at 27 feet bgs in what would be the top or smear zone of the first encountered groundwater. The reported COC concentrations in the grab groundwater are most likely biased high because the act of collecting grab groundwater sample disturbs the soil structure, which greatly increases petroleum-impacted soil particles and can release immobile product from the soil pores⁵. It has been shown that turbid samples from the smear zone are not representative of dissolved-phase concentrations, because the non-dissolved petroleum contained within the samples as turbidity is included in the analysis (Zemo, 2009)⁶.

The probability of free product at the groundwater interface is low, based on the sampling limitations described above and because neither free product or dissolved petroleum hydrocarbons are present in samples from well GW01, located approximately 15 feet away, and was not observed in other borings performed in the vicinity of SB004 and SB010.

On a final note, we reviewed the five groundwater criteria presented in the *Low-Threat Underground Storage Tank Case Closure Policy*⁷ and find that the site conditions satisfy Criteria 1:

- The contaminate plume that exceeds water quality objectives is less than 100 feet in length (localized around SB004 and SB0-010).
- There is no free product; and
- The nearest existing water supply well or surface water body is greater than 250 feet from the defined plume boundary.

8. Section 6.0, Conclusions and Recommendations – *This section should be revised to be consistent with preceding revisions to the report. Also, the second paragraph should be revised to describe that the proposed remedial action to address contamination has not been determined. Rather, as a next step, a feasibility*

⁵ RWQCB. 2012. Leaking Underground Fuel Tank Guidance Manual. September (Revised December 2015)

⁶ Zemo, Dawn A. 2009. Suggested Methods to Mitigate Bias from Non-dissolved Petroleum in Groundwater Samples Collected from the Smear Zone. August 3.

⁷ SRWQCB. 2012. Low-Threat Underground Storage Tank Case Closure Policy. August 17.

evaluation will be performed to analyze remedial action alternatives, using standard environmental industry practices.

Based on the age of the primary release, the lack of widespread impacts to groundwater, and the low potential for future impact to groundwater, and as supported by site conditions that satisfy Criteria 1 of the *Low-Threat Underground Storage Tank Case Closure Policy*, no further investigation of groundwater is recommended. Groundwater monitoring will continue for one more quarter (4 total quarters). Assuming the fourth quarter data are similar to the first three sampling events (See Table 2), no further action relative to groundwater is warranted.

As you mentioned, the next step is to complete a Feasibility Evaluation to analyze remedial action alternatives for the soil vapor pathway, including a comparison of secondary source (impacted soil) excavation to vapor mitigation within the building. Based on the outcome of the Feasibility Evaluation, a Corrective Action Plan will be prepared and submitted to you for approval.

We would like to meet with you at your convenience to go over this matter. Please feel free to call Sally Schoemann at 925-381-6490 or Alfonso Ang at 415-644-3003, if you have any questions or concerns.

Sincerely,

Sally Schoemann, P.E.

Subject: Regional Water Board Review of the Nov. 7, 2018 Supplemental Site Investigation Report and March 6, 2019 DRAFT Response to Comments Fuel Distribution System Section BR11-1, Riley Avenue Site Presidio of San Francisco

Dear Ms. Larssen:

I reviewed the subject report, which presents the results of the supplemental soil and groundwater investigation at the Riley Avenue Site (Site). I also reviewed the Draft Response to Comments (Draft RTCs) that address my January 3, 2019 comments on the report and present new groundwater monitoring data, geologic cross-sections, and other information. Based on my review, I have additional comments that are described below. The primary goal of these comments is to produce an accurate characterization of contamination and risk that is necessary for a useful feasibility evaluation of Site cleanup alternatives.

1. **Section 1.1, Site Description** – Please provide an acceptable technical justification for not investigating potential contamination in the area of the former 1,500-gallon underground storage tank in the yard of Unit 127B, which supplied fuel oil to the FDS, Section BR11-1.
2. **Section 5.1, Soil Impact Delineation** – Please depict the extent of soil contamination on the Figure F-2 and F-3 cross-sections.
3. **Section 5.2, Groundwater Delineation** – The extent of groundwater contamination must be acceptably delineated on Figure 4. The 100-square-foot “localized plume of impacted groundwater” shown on Figure 4 is unrealistically small. A larger plume size is indicated by the magnitude of contamination at borings SB004 and SB010 within this area, as well as the presence of sand beneath the release through which petroleum contamination could migrate for decades.

Further, it is not clear what the “localized plume of impacted groundwater” represents on Figure 4. Is it the extent of combined diesel- and motor oil-range total petroleum hydrocarbons (TPH-d and TPH-mo) in groundwater at concentrations greater than Regional Water Board environmental screening levels (ESLs)? Is it the extent of combined

DR. TERRY F. YOUNG, CHAIR | MICHAEL MONTGOMERY, EXECUTIVE OFFICER

gasoline- and Bunker C-oil range TPH (TPH-g and TPH-bc) in groundwater at concentrations greater than ESLs? Is it the extent of petroleum in groundwater at concentrations greater than or equal to laboratory detection limits? I recommend that following extents of contamination be delineated on Figure 4:

- a. NAPL (note, the extent of NAPL, in part, may appear as a linear feature along the length of the leaking FDS pipe);
- b. Dissolved petroleum in groundwater at concentrations greater than ESLs; and
- c. Dissolved petroleum in groundwater greater than or equal to detection limits.

The report must be revised acceptably to describe and depict the nature and full extent of groundwater contamination. Please add laboratory analytical results for TPH-bc to Figure 4.

4. **Section 6.0, Conclusions and Recommendations, last bullet** – The bullet states that “[g]roundwater detections during the supplemental investigation consisted of petroleum metabolite and/or biogenic hydrocarbons and no free product was observed during the supplemental investigation or groundwater monitoring event.” RTC 7 states that “there is no free product.”

Based on multiple lines of evidence, free product likely exists. First, TPH-g, TPH-d, and TPH-mo concentrations in groundwater at boring SB004 in Unit 127B’s front yard were very high: 1,900 µg/L, 170,000 µg/L, and 13,000 µg/L, respectively. The TPH-d concentration is much greater than the solubility of fresh diesel. Second, the log for boring SB010 describes “brownish liquid bubbles,” “light brownish liquid,” and “product suspected” in the saturated sand from approximately 17 to 25 feet below ground surface (bgs). Third, our Technical Specialist reviewed the chromatogram for the SB004 groundwater sample and described it as such:

“This looks like weathered diesel NAPL. The Unresolved Complex Mixture (UCM) spans the same time interval on the x-axis, so that indicates hydrocarbons not metabolites. The quantitation is well above what is expected for fresh diesel (about 1,000 – 5,000 µg/L). The UCM looks like product (NAPL) and it’s lost the n-alkane peaks so typical of weathered hydrocarbons. It might indicate mobile NAPL.”

Regarding fuel oil’s mobility, the TPH-d concentrations in samples from SB010 (up to 18,000 mg/kg) and SB004 (to 12,000 mg/kg) may be greater than fuel oil’s residual saturation, indicating potential NAPL mobility. Also, the fuel oil release was certainly mobile in the past, or it would not have traveled down through approximately 17 feet of clay and more than 15 feet of Colma Formation sand to Franciscan bedrock in the area of borings SB004 and SB010. I agree that due to its viscosity, fuel oil is less or much less mobile than other fuels (e.g., compared to diesel and gasoline).

The report must acceptably describe the occurrence, nature, and mobility of subsurface NAPL.

Section 6.0, Conclusions and Recommendations – Based on RTC 7, it appears that the Trust may be pursuing closure under the Low-Threat Underground Storage Tank Case Closure Policy (LTUCP), or selectively using the LTUCP’s groundwater-specific criteria to show that the Site poses a low threat to human health and the environment. However, the LTUCP is meant for sites where there has been cleanup “of a substantial fraction of a petroleum contaminant mass with the investment of a reasonable level of effort.” All of the general criteria must also be satisfied for eligibility, including:

June 19, 2019

- d) Free product has been removed to the maximum extent practicable. For the reasons provided above, free product likely exists in the subsurface. No free product has yet been removed.
- e) A conceptual site model (CSM) that assesses the nature, extent, and mobility of the release has been developed. Although the report's CSM is mostly complete, it must be revised to acceptably describe the nature, extent, and mobility of the release.
- f) Secondary source has been removed to the extent practicable. In 2017, a limited amount of soil was removed beneath the former basement slab of Unit 127B. Overall, little mass of petroleum-impacted soil or groundwater at the point of the release has been removed.

Further, the Site satisfies none of the low-threat criteria for the vapor-intrusion-to-indoor-air pathway, because soil contamination is in, or nearly in, direct contact with the basement slabs of Units 127B, 127A, and 128A (i.e., there is no bio-attenuation zone).

The risk driver is petroleum vapor intrusion (VI) from subsurface soil to indoor air. To mitigate VI to the indoor air of Unit 127B, a sub-slab venting system has been installed there. Further, land use controls, including annual inspections and inter-occupancy indoor air sampling, will be implemented at Units 127A and 127B, to ensure long-term protection of human health. It is my understanding that the feasibility evaluation of remedial alternatives, which could minimize the level and timeframe of the VI risk, is underway. I look forward to reviewing the feasibility evaluation report.

The Regional Water Board may in the future determine that the petroleum plume poses a low threat to human health and the environment. In that event, then we would close the case by issuing a "No Further Action" letter. To advance this case toward closure, please continue groundwater monitoring on an annual basis, to confirm that the petroleum groundwater plume is accurately delineated and stable or decreasing in areal extent.

If you have any questions, please contact me at 510.622.2375 or jeff.white@waterboards.ca.gov.

Sincerely,

Jeff White

Subject: *Supplemental Site Investigation Report and Second Response to Comments*
Regional Water Quality Control Board Review of the Nov. 7, 2018 Supplemental Site Investigation Report and March 6, 2019 DRAFT Response to Comments
Fuel Distribution System Section BR11-1, Riley Avenue, Presidio of San Francisco

Dear Mr. White:

On behalf of the Presidio Trust, TRC submits the *Supplemental Site Investigation Report for Fuel Distribution System Section BR11-1*, on Riley Avenue in the Presidio of San Francisco (Amended SSI Report), and presents the following response to your comments (RTCs) dated June 19, 2019 on the *Draft Supplemental Site Investigation Report* (SSI report), dated Nov. 7, 2018. Your comments also included your review of TRC's *Draft Response to Comments*, dated March 6, 2019. Each of your comments are presented below in italics, followed by our response.

Comment 1. Section 1.1, Site Description – *Please provide an acceptable technical justification for not investigating potential contamination in the area of the former 1,500-gallon underground storage tank in the yard of Unit 127B, which supplied fuel oil to the FDS, Section BR11-1.*

Response: Since our March 2019 letter, the Trust further researched historic documents and new information emerged confirming the location of the UST in the southwest corner of the Unit 127B yard. Additional historic documents confirm the location of former UST 127 to be in the landscaped area just north of the Riley Avenue and Sheridan Avenue intersection (Attachment A). The 1,500-gallon capacity underground storage tank (UST) was removed in 1978 and received a no further action (NFA) from the RWQCB in 2013. The NFA concurrence was based on a review of historical records and observation during renovations of the building and landscape areas as well as monitoring results from four nearby groundwater monitoring wells, conducted over the years since the tank was removed - all indicating no significant residual petroleum impacts in the vicinity of the former UST 127. Moreover, sample results from soil borings SB007, BR11-1SB011, BR11-1SB012, and BR11-1SB013, which are located between the former tank location and the fuel release at building 127, are all below screening levels for TPH as gasoline, diesel and motor oil. This further supports the conclusion that the petroleum-contaminated soil associated with BR11-1 did not originate at the former UST 127 location.

Comment 2. Section 5.1, Soil Impact Delineation – *Please depict the extent of soil contamination on the Figure F-2 and F-3 cross-sections.*

Response: The extent of soil contamination above environmental screening levels is shown on revised Figures F-2 and F-3 in the Amended SSI Report.

Comment 3. Section 5.2, Groundwater Delineation – *The extent of groundwater contamination must be acceptably delineated on Figure 4. The 100-square-foot “localized plume of impacted groundwater” shown on Figure 4 is unrealistically small. A larger plume size is indicated by the magnitude of contamination at borings SB004 and SB010 within this area, as well as the presence of sand beneath the release through which petroleum contamination could migrate for decades.*

Further, it is not clear what the “localized plume of impacted groundwater” represents on Figure 4. Is it the extent of combined diesel- and motor oil-range total petroleum hydrocarbons (TPH-d and TPH-mo) in groundwater at concentrations greater than Regional Water Board environmental screening levels (ESLs)? Is it the extent of combined gasoline- and Bunker C-oil range TPH (TPH-g and TPH-bc) in groundwater at concentrations greater than ESLs? Is it the extent of petroleum in groundwater at concentrations greater than or equal to laboratory detection limits? I recommend that following extents of contamination be delineated on Figure 4:

- a. NAPL (note, the extent of NAPL, in part, may appear as a linear feature along the length of the leaking FDS pipe);*
- b. Dissolved petroleum in groundwater at concentrations greater than ESLs; and*
- c. Dissolved petroleum in groundwater greater than or equal to detection limits.*

The report must be revised acceptably to describe and depict the nature and full extent of groundwater contamination. Please add laboratory analytical results for TPH-bc to Figure 4.

Response: Based on additional laboratory analyses (i.e. silica gel cleanup) and follow-up evaluations from the RWQCB’s Technical Specialist and TRC’s specialists, the localized groundwater plume of TPH-d shown on Figure 4 is expanded in the Amended SSI Report. In addition, the extent of suspected non-aqueous phase liquid (NAPL), dissolved petroleum in groundwater greater than ESLs, and laboratory analytical results for TPH-bc were also added to Figure 4.

Based on the results presented on Figure 4 and our conference call on May 16, 2019, we concur that groundwater monitoring should continue on an annual basis (first quarter 2020 to be the next event) and groundwater impacts will be reevaluated with each monitoring event and reported in the Trust’s Annual Report to the RWQCB. The additional year of groundwater monitoring will include standard field parameters plus laboratory analyses for TPH-g, TPH-d, TPH-mo, TPH-bc, and total dissolved solids (TDS), but will no longer include polycyclic aromatic hydrocarbons (PAH’s), volatile organics, benzene, toluene, ethylbenzene and xylene (BTEX) not detected in groundwater during the completed four quarters of monitoring.

Comment 4. Section 6.0, Conclusions and Recommendations, last bullet – *The bullet states that “[g]roundwater detections during the supplemental investigation consisted of petroleum metabolite and/or biogenic hydrocarbons and no free product was observed during the supplemental investigation or groundwater monitoring event.” RTC 7 states that “there is no free product.”*

Based on multiple lines of evidence, free product likely exists. First, TPH-g, TPH-d, and TPH-mo concentrations in groundwater at boring SB004 in Unit 127B’s front yard were very high: 1,900 µg/L, 170,000 µg/L, and 13,000 µg/L, respectively. The TPH-d concentration is much greater than the solubility of fresh diesel. Second, the log for boring SB010 describes, “brownish liquid bubbles,” “light brownish liquid,” and “product suspected” in the saturated sand from approximately 17 to 25 feet below ground surface (bgs). Third, our Technical Specialist reviewed the chromatogram for the SB004 groundwater sample and described it as such:

“This looks like weathered diesel NAPL. The Unresolved Complex Mixture (UCM) spans the same time interval on the x-axis, so that indicates hydrocarbons not metabolites. The quantitation is well above what is expected for fresh diesel (about 1,000 – 5,000 µg/L). The UCM looks like product

(NAPL) and it's lost the n-alkane peaks so typical of weathered hydrocarbons. It might indicate mobile NAPL."

Regarding fuel oil's mobility, the TPH-d concentrations in samples from SB010 (up to 18,000 mg/kg) and SB004 (to 12,000 mg/kg) may be greater than fuel oil's residual saturation, indicating potential NAPL mobility. Also, the fuel oil release was certainly mobile in the past, or it would not have traveled down through approximately 17 feet of clay and more than 15 feet of Colma Formation sand to Franciscan bedrock in the area of borings SB004 and SB010. I agree that due to its viscosity, fuel oil is less or much less mobile than other fuels (e.g., compared to diesel and gasoline).

The report must acceptably describe the occurrence, nature, and mobility of subsurface NAPL.

Response: The text in the Amended SSI Report is revised to remove the reference to "no free product" being present. Although free product has not been observed by field sampling staff or confirmed in analytical testing, we concur with you that the concentrations present in select grab groundwater and soil samples indicate a likelihood that free product exists in the vicinity of SB004 and SB010. To capture this potential risk, the final SSI Report text and Figure 4 are revised to include the potential for the presence of free product along a limited section of FDS piping that was historically located above locations SB004 and SB010.

Comment 5. Section 6.0, Conclusions and Recommendations, last bullet – *Based on RTC 7, it appears that the Trust may be pursuing closure under the Low-Threat Underground Storage Tank Case Closure Policy (LTUCP), or selectively using the LTUCP's groundwater-specific criteria to show that the Site poses a low threat to human health and the environment. However, the LTUCP is meant for sites where there has been cleanup "of a substantial fraction of a petroleum contaminant mass with the investment of a reasonable level of effort." All of the general criteria must also be satisfied for eligibility, including:*

- d. Free product has been removed to the maximum extent practicable. For the reasons provided above, free product likely exists in the subsurface. No free product has yet been removed.*
- e. A conceptual site model (CSM) that assesses the nature, extent, and mobility of the release has been developed. Although the report's CSM is mostly complete, it must be revised to acceptably describe the nature, extent, and mobility of the release.*
- f. Secondary source has been removed to the extent practicable. In 2017, a limited amount of soil was removed beneath the former basement slab of Unit 127B. Overall, little mass of petroleum-impacted soil or groundwater at the point of the release has been removed.*

Further, the Site satisfies none of the low-threat criteria for the vapor-intrusion-to-indoor-air pathway, because soil contamination is in, or nearly in, direct contact with the basement slabs of Units 127B, 127A, and 128A (i.e., there is no bio-attenuation zone).

The risk driver is petroleum vapor intrusion (VI) from subsurface soil to indoor air. To mitigate VI to the indoor air of Unit 127B, a sub-slab venting system has been installed there. Further, land use controls, including annual inspections and inter-occupancy indoor air sampling, will be implemented at Units 127A and 127B, to ensure long-term protection of human health. It is my understanding that the feasibility evaluation of remedial alternatives, which could minimize the level and timeframe of the VI risk, is underway. I look forward to reviewing the feasibility evaluation report.

The Regional Water Board may in the future determine that the petroleum plume poses a low threat to human health and the environment. In that event, then we would close the case by issuing a "No

505 Sansome St., Suite 1600
San Francisco, CA 94111

T 415.434.2600
TRCcompanies.com

Further Action” letter. To advance this case toward closure, please continue groundwater monitoring on an annual basis, to confirm that the petroleum groundwater plume is accurately delineated and stable or decreasing in areal extent.

Response: As discussed during the May 16, 2019 call, the Trust is not pursuing closure under the Low-Threat Underground Storage Tank Case Closure Policy (LTUCP) and does not intend to selectively use the LTUCP’s groundwater-specific criteria to show that the Site poses a low threat to human health and the environment. The final SSI Report is edited to clarify this intent. In addition, the Trust intends to implement annual monitoring in the first quarter of each year as described in the response to Comment 3.

As noted in the report, vapor intrusion (VI) risk to human health and environmental receptors will be addressed in the pending Feasibility Study/Corrective Action Plan. Additionally, and as suggested by the RWQCB, the Trust plans to include land use controls, including annual inspections and inter-occupancy indoor air sampling as part of the long-term monitoring of the Site.

If you have any questions or would like to set up a meeting to discuss our responses the comments addressed above in more detail, please feel free to call Sally Schoemann at 925-381-6490 or Alfonso Ang at 415-644-3003.

Sincerely,

A handwritten signature in black ink that reads "Sally Schoemann".

PHASE II PRELIMINARY ASSESSMENT
PRESIDIO OF SAN FRANCISCO

UNDERGROUND STORAGE TANK
DATA SHEETS

UNDERGROUND STORAGE TANK LOCATION AND STATUS ASSESSMENT PRESIDIO OF SAN FRANCISCO

Background

The Presidio of San Francisco (PSF) has been recommended for closure by the Defense Secretary's Commission on Base Realignment and Closure. An enhanced Preliminary Assessment (PA) of the PSF has been completed by the U.S. Army Toxic and Hazardous Materials Agency (USATHAMA). The enhanced PA states that underground storage tanks (USTs) represent the greatest potential threat to the environment at the PSF. Personnel of the Base Closure Division, USATHAMA, requested that the Geotechnical Laboratory (GL), U.S. Army Engineer Waterways Experiment Station (WES), conduct a Phase II PA at the PSF. The on-site work at PSF was performed by a team of four WES personnel during the period 7 February through 3 March 1990.

Procedures

The Phase II PA was accomplished by a combination of interviews, map file searches, surface and in-building reconnaissance, and geophysical surveys. The PSF Directorate of Engineering and Housing (DEH) was base of operations during the on-site investigations. DEH personnel were interviewed for their knowledge of USTs at the PSF, and DEH historical map files were searched for UST information. Using this information and the findings of the enhanced PA, a comprehensive reconnaissance survey of all suspected UST locations was conducted. The reconnaissance survey consisted of

1. Interviews with occupants of buildings associated with UST locations;
2. Inspection surveys around and within buildings to locate physical evidence of the presence of USTs.

For USTs with unknown locations following the reconnaissance survey, surface geophysical methods were used to confirm or refute the existence of the USTs and to map locations. Two electromagnetic (EM) systems were used for the geophysical surveys, the Geonics EM-38 and the Geonics EM-31. These EM systems have different depth of investigation and horizontal resolution capabilities. The EM-38 has an effective depth of investigation of approximately 1.5 m and is not affected by the presence of

surface or other buried features greater than 1-2 m distant. The EM-31, utilized in the in-phase mode, has an effective depth of investigation of 4-5 m.

The geophysical surveys relied on referencing locations to the buildings associated with each tank location; or in case of locations where the buildings have been removed, the tank locations were referenced to some other nearby landmark. The geophysical survey procedure consisted of scanning the area surrounding buildings with unknown UST locations. After the scanning, anomalous areas were crisscrossed on closely spaced survey lines in an effort to outline the tank location. At some sites, there was considerable interference with the EM surveys from buried pipes and utilities and nearby surface metallic objects.

Appendix G, "Underground Storage Tanks at PSF", and Table 3-2, "Unconfirmed but Probable Underground Storage Tanks", from the PA report served as points of departure for the on-site surveys. Additional UST sites for investigation were added to the lists based on interviews and reconnaissance. Approximately 30 USTs are apparently registered with the State of California; the list of registered USTs was cross-referenced with the PA UST list.

For each site investigated, a UST Information Sheet was completed, including a location sketch if possible. For tanks underneath the concrete floors of basements, the sketches may only indicate the location of supply pipes. For the housing/quarters areas with tanks below the building basements, where there are many identically, contemporaneously constructed buildings, it was physically impossible to gain access to each building. For these situations, the UST location determination relied on drawings (if available) and access to a selected few buildings to establish a pattern for the buildings of a particular style. The primary areas in which the establishment of a pattern was utilized for location were the 500 and 700 areas.

Where possible, access to the USTs was attempted. In many cases, access caps and plugs were rusted and could not be easily removed. Also, many of the USTs had access caps and plugs requiring special devices for removal. In a few cases, access was not completed or attempted for safety reasons; e.g., at PSF-1110.2, the tank was under pressure.

Results

The results of the UST location and status assessment surveys are summarized in the tabulation below:

- 228 - - total confirmed USTs at PSF
- 86 - - USTs listed in PA which apparently do not exist
- 81 - - USTs confirmed which are not listed in PA
- 4 - - USTs listed in PA which the surveys failed to confirm or refute
- 3 - - USTs which are registered and listed in PA but apparently do not exist
- 42 - - USTs with confirmation based on pattern recognition
- 17 - - USTs which are apparently in an active status

Detailed results of the surveys are presented in two forms, a database listing and a compilation of UST Information Sheets. The tank identification includes the PSF identification, building number, and a numerical designator corresponding to the number of tanks at the building location (1-4 for example). The key to the database listing is contained in the second column under the heading "Code." The code is a cryptic summary of status of the UST and the manner in which that status was determined. The first letter in the code indicates whether the UST was listed (L) in the PA or not (U). The second letter indicates whether the UST is confirmed (C), apparently doesn't exist (X), has been removed (R), or has an unknown status (F; failed to confirm or refute). The remainder of the letters in the code indicate the manner in which the UST was confirmed: surface indications (S), geophysics (G), drawings (D), pattern (P), accessed (A). When access was possible, a rod was used to determine depth to bottom of the tank and depth of liquid in the tank. Depths to the top of most tanks at PSF are in the 1-4 ft range, while observed and reported depths to bottom ranged from 4 to 12 ft. The tanks at PSF-1802.1 and .2 lie at a depth to top of 7 ft and (based on reported capacity) a depth to bottom of approximately 17 ft.

The third column contains a brief location description for each listing. Additional details regarding location are contained in the comments column (last column) in some cases. Tank size in gallons, indicated in the seventh column, was found on drawings, from interviews, and, where shown with an asterisk, from the PA. Only five USTs were found to be made of materials other than steel: one concrete, one redwood, three fiberglass. Tank contents were determined from interviews, the PA listing, or, in the case of direct access, the appearance and/or smell of the contents. The tank contents can be grouped in four categories: bunker oil, a thick, viscous, black oil product; fuel oil and diesel; gasoline; and other. There was some uncertainty among the WES team as well as PSF personnel on the distinction

and classification of fuel oil and diesel. The other category includes cleaning solvents, waste oil products, pesticide wash, hydraulic oil, and oily water.

In addition to problems with leaking USTs in the 900-area which were identified in the PA, two additional sites were found which require prompt remediation or safety corrective measures. At location PSF-1260, a UST with a capacity of approximately 12,000 gallons, containing a significant volume of gasoline, had a severed fill/access pipe. PSF-1260 is in an area being utilized as construction waste storage area and the fill pipe had apparently been severed at ground level by construction equipment. The area was flagged and the construction foreman was notified regarding the location of the UST. At location PSF-1399, the Battery Dynamite area, a large tank containing fuel oil was discovered with an open fill pipe.

Remediation efforts which involve UST excavation should consider the following comments and suggestions:

1. Depths to top of USTs at PSF are generally less than 4 ft unless noted otherwise; if excavation at a site proceeds to greater than this depth (say 6 ft) with no indication, then the UST likely does not exist;

2. Due to uncertainty over the fuel oil/diesel distinction, remediation efforts should be prepared for either substance when one or the other is indicated;

3. Unless noted otherwise, USTs should be assumed to contain petroleum products, since only two of the tanks accessed were found to be empty, two were filled with sand, and five were filled with fluids other than petroleum products; with the proper tools, many more USTs can be accessed prior to excavation.

29 March 1990

John,

Enclosed is a narrative for the PSF Phase II PA, the database listing, and the individual UST Data Sheets. Please review and let me know if you desire any changes in database format or additional information in the narrative. When everything is finalized, we need to send a copy to you through our channels.

Of the funds expended to date, approximately \$5K should be attributed to the Hamilton AFB work (no travel, etc.). After the "dust settles" and all charges trickle in, we should have a balance of approximately \$10-12K.

The balance can be returned to you. Or, if there are additional gaps in the database you would like to try to fill, one person could go back to PSF for 2-3 days and actually accomplish quite a lot. For example, with the proper equipment (wrenches, slotted bars, etc.), it would be possible to access additional USTs, and with some preparatory work by the DEH it would be possible to reduce the number of USTs confirmed by pattern only. Also we could address the few sites in the LF category.

A handwritten signature in black ink, appearing to read "Dwain Butler". The signature is stylized and cursive.

Dwain Butler

UST INFORMATION FORM

SITE NAME: Bldg 122

TANK IDENTIFICATION NO.: BF-122 REGISTERED 110

DESCRIPTION: Size (Gal.): _____

Year Installed: _____ Diameter/Length(ft): _____

Depth to Top: _____ Steel (?): _____

Depth to Bottom: _____

Drop Tubes/Vents: 110

Product Stored: _____

Tested (?, details): 10

Status (Active, inactive, etc.): inactive

SITE DESCRIPTION (Geology, water table, monitoring wells, etc.):

SITE/TANK LOCATION SKETCH (Use back is needed):

COMPLETELY REMODELED IN BASEMENT.
THIS BUILDING ~~WAS~~ ^{MAY} HAVE ONCE BEEN
~~SERV~~ SERVICED BY THE TANK REMOVED
FROM IN FRONT OF BLDG 127.
