REVISED SECTION BR11-1 SUPPLEMENTAL SITE INVESTIGATION REPORT
FUEL DISTRIBUTION SYSTEM
RILEY AVENUE, PRESIDIO OF SAN FRANCISCO
SAN FRANCISCO, CALIFORNIA

1.0 INTRODUCTION

This *Revised Supplemental Site Investigation Report (Revised Report)* has been prepared by TRC Solutions, Inc. (TRC) on behalf of the Presidio Trust (the Trust) to characterize and discuss soil and groundwater impacts associated with the fuel oil release from Section BR11-1 of the former Fuel Distribution System (FDS) at the Presidio of San Francisco. The investigation described herein was conducted in conformance with the *Revised Addendum 2 Section BR11-1 Supplemental Site Investigation Work Plan* (TRC, 2018a) (*Supplemental Work Plan*) approved by the Regional Water Quality Control Board (RWQCB) on May 10, 2018 via email approval (RWQCB, 2018a). This *Revised Report* addresses RWQCB's comments dated January 3, 2019 and June 19, 2019 (RWQCB, 2019a and 2019b). Comments and responses are included as **Attachment G**.

This *Revised Report* presents the soil and groundwater investigation activities performed to further delineate the horizontal and vertical extents of fuel oil in soil and groundwater and supplements the information previously presented in the *Interim Update Report* (TRC, 2017c). The findings from the investigation were used to refine the site conceptual model originally presented in *Supplemental Work Plan* and develop a remedial approach protective of human health and the environment. The proposed remedial approach is not included in this *Report* and will be presented under a separate cover.

1.1 Site Description

Former FDS Section BR11-1 (the Site) is located in the Main Post Area of the Presidio of San Francisco (Presidio), San Francisco, California (**Figure 1**). Section BR11-1 serviced boilers in the basements of residential Buildings 127A/B, 128A/B, and 129A/B on the west side of Riley Avenue (**Figure 2**).

Additionally, a 1,500-gallon fuel oil underground storage tank (UST; historically referenced as Tank 127 or PSF-127) was used to store fuel for the boilers. This UST was previously located in the landscaped area south of Building 127, near the intersection of Riley Avenue and Sheridan Avenue (shown on **Figure 2**), and was removed in 1978. The Trust submitted a request for No Further Action (NFA) for Tank PSF-127 in September 2010 (Trust, 2010) and received RWQCB concurrence in January 2013 (RWQCB, 2013).

1.2 BR11-1 Remedial History

A summary of remedial actions associated with BR11-1 is presented below.

The FDS was substantially removed by the U.S. Army between 1996 and 1999. Documentation of the removal activities and associated confirmation sampling is presented in the three (3)-volume report, titled *Fuel Distribution System Closure Report, Presidio of San Francisco, California*, prepared by IT Corporation (IT) and dated May 1999 (IT, 1999).

On January 27, 2006, the Presidio Trust submitted the *FDS Closure Certification Report – Phase I* to the RWQCB requesting closure of 27 FDS sections, including Section BR11-1. On September 16, 2009, the RWQCB determined that NFA was required (RWQCB, 2009).

In May 2017, soil contaminated with total petroleum hydrocarbons as diesel (TPH- d) was discovered during maintenance work in the basement of residential Building 127B. The Trust implemented interim remedial measures in accordance with the established *Petroleum Contingency Plan* (EKI, 2004), including initial soil and groundwater sampling to characterize the area of impact, limited excavation of impacted soil, placement of oxygen release compound within the excavation, and backfill with clean soil.

The Trust notified the RWQCB of the discovery and interim remedial actions were taken on July 19, 2017. Based on the information provided by the Trust, the RWQCB re-opened FDS Section BR11-1 in an email dated July 20, 2017 (RWQCB, 2017a).

In October 2017, the Trust performed soil, sub-slab vapor, and groundwater sampling in accordance with the September 14 Work Plan (TRC, 2017a), the September 27 site specific Health & Safety Plan (HASP) (TRC, 2017b), and the revised soil and soil vapor investigation approach for Building 128A, sent via email to RWQCB on October 10, 2017. The results of the investigation were submitted to the RWQCB in an *Interim Update Report* (TRC, 2017c).

On November 13, 2017, the Trust implemented interim measures at Building 127B. The interim measures consisted of the installation of a 15-mil, Stego® vapor barrier over the entire exposed basement floor and 4-inch ventilation fan. The fan exhaust was routed to the outside of the building through the existing chimney flue. The 100 cubic feet (ft) per minute nominally rated ventilation fan is set to automatically run for 1.5 hours with 1-hour off intervals.

On November 29, 2017, the RWQCB issued a letter to the Trust requiring submittal of a vapor intrusion work plan for Buildings 127A, 128A, and 129B (RWQCB, 2017b). A review of available building information including building information sheets and floor plans along with a building survey of Buildings 127A, 128A, and 129B was performed on December 4, 2017 to identify potential vapor migration pathways and select proposed sampling locations.

The *VI Work Plan* was submitted to RWQCB on December 20, 2017 (TRC, 2017d). RWQCB comments and conditional approval of the *VI Work Plan* was received by the Trust on January 12, 2018 (RWQCB, 2018b). On January 19, 2018, the Trust submitted a

letter response acknowledging RWQCB's comments and amending the *VI Work Plan*, accordingly (TRC, 2018b).

Between February and July 2018, the Trust conducted soil vapor intrusion (SVI) investigations at Buildings 127A, 128A, and 129B, and additional sub-slab vapor investigations at Buildings 128B and 129A. Results of the SVI and sub-slab investigations were documented and reported to the RWQCB under separate cover (TRC, 2018c, 2018d, and 2018e).

In June and July 2018, the Trust conducted supplemental soil and groundwater investigations. Supplemental investigations consisted of the installation of 23 soil borings, three (3) groundwater wells, collection of grab groundwater and soil samples, and initial sampling of installed groundwater monitoring wells. In October 2018, the Trust conducted the second groundwater monitoring event. Investigation activities and results are presented in Sections 3.0 and 4.0, respectively.

1.3 Conceptual Site Model (Soil and Groundwater)

A Conceptual Site Model (CSM) for soil and groundwater was presented in Addendum 1, the *VI Work Plan* and has been updated based on the results of this supplemental investigation. In summary:

- Soil containing residual TPH-d is known to be present directly beneath the basements of Buildings 127A (based on sub-slab vapor data), 127B, and 128A serviced by BR11-1. Residual TPH-d soil impacts were also detected in subsurface soils to the southeast of Buildings 127A and 127B: confined laterally to the front yards and vertically between 5 and 30 ft below ground surface (bgs). No soil contamination was detected in soil samples collected from the surface to 50 ft bgs to the southwest, northwest and northeast of 127A and 127B. Similarly, no soil contamination was detected in samples collected from the surface to 50 ft bgs to the southeast, northeast and northwest of Building 128A.
- Subsurface soils have generally been characterized as lean clay with interbedded sands down to 35 to 40 ft bgs at the southwest area of the Site beneath Buildings 127A and 127B and increasing down to the northeast to at least 50 ft bgs beneath Building 128A. Soil boring data indicates bedrock is encountered starting at 35 ft bgs beneath buildings 127A and 127B. No bedrock was encountered down to 50 ft bgs beneath 128A. Shallow soils around the basement walls and beneath the basement concrete slab are generally moist and, in some cases, perched water has been observed directly below and adjacent to the slab.
- Depth to groundwater at the southwest area where the bedrock high is located range from 23.30 ft (BR11-1GW01) to 34.06 ft (BR11-1GW03) bgs with calculated elevations of 58.48 and 47.65 ft (referenced to the North American Vertical Datum of 1988 [NAVD 88]), respectively. Depth to groundwater elevation declines to a measured depth of 56.88 ft bgs (BR11-1GW02) with elevation of 19.15 ft towards the northeast where the bedrock high was no longer present.

-
- Groundwater data from installed groundwater monitoring wells on Site and other nearby Presidio groundwater monitoring locations, indicates the direction of groundwater flow is to the north, as shown on Figure 4.
 - Based on historic boring logs and recent subsurface investigations, the Site's lithology has been evaluated and is composed of well bedded, fine- to medium-grained sands with interbedded layers of silts and clays, and is presented on cross-sections F-1, F-2 and F-3, included as **Attachment F**.
 - Site lithology contains impermeable layers above bedrock, which creates localized lenses of perched groundwater; this is observed at locations SB004, GW01, and GW03, which show groundwater elevations approximately 30 ft to 40 ft above the local laterally-continuous water-bearing zone.
 - TPH-d was originally identified southeast of Building 127B in water encountered at 27 ft bgs. However, TPH-d analytical results from collected grab groundwater and installed monitoring wells samples were either below screening levels, or, above screening levels but, at a lower magnitude than what was detected southeast of Building 127B at 27 ft bgs in soil boring SB004. TPH-d detections in groundwater above screening levels have been identified northeast and east of Building 127A, southeast of Building 127B, and southeast of Building 128A in water encountered between 23 and 57 ft bgs. However, based on chromatograph review, the detected TPH-d is suspected to be primarily biogenic origin and not petroleum hydrocarbon. Quarterly groundwater monitoring is scheduled to continue at the Site to further assess if the residual soil contamination southeast of Building 127B has resulted in groundwater impacts beyond those initially encountered at 27 ft bgs.
 - Fate and transport of secondary source groundwater impacts include potential downgradient migration due to advection and, to a lesser degree, diffusion and dispersion. However, due to the presence of perched lens, impacted groundwater at locations SB004 and GW-01 are most likely hydraulically disconnected from local laterally continuous groundwater bodies.
 - An additional secondary source impact is contaminant vapors releasing from impacted subsurface soil. These vapors migrate through the vadose zone, through preferential paths of least resistance, and can exit through the soil-atmosphere boundary or into overlaying buildings. Soil vapor intrusion (SVI) investigations have been conducted indicating no unacceptable human health risk from SVI is present in Buildings 127A, 128A/B and 129A/B. A vapor mitigation system was installed in the basement of Building 127B to address vapor intrusion. A report documenting the installation and initial vapor intrusion sampling is currently under preparation and will be submitted under a separate cover.
 - Potential human receptors include existing and future residential tenants and the occasional maintenance worker. However, residual soil contaminations is at depth and exposure mitigated by existing overlaying hardscape (concrete slabs) and landscaping (un-impacted soil).
 - Potential ecological receptors included the Crissy Marsh and the San Francisco Bay by possible transport of contaminants via existing storm drain utilities lines. However, identified lateral and vertical extents of soil impacts do not intersect known storm drain lines servicing Riley Avenue and reported groundwater

contaminant concentrations are below Aquatic Habitat Environmental Screening Levels (ESL). As such, the exposure pathway for ecological receptors via soil or groundwater exposure is considered incomplete.

2.0 CHEMICALS OF CONCERN AND SCREENING LEVELS

The following are the identified chemicals of concern (COCs):

- **Soil:** TPH-d and naphthalene are the primary COCs detected above screening levels in soil.
- **Groundwater:** TPH-d and total petroleum hydrocarbons as gasoline (TPH-g) have been detected above current Site screening levels. Additional contaminants detected include total petroleum hydrocarbons as motor oil (TPH-mo) and bunker c oil (TPH-bc).
- **Sub-Slab/Soil Vapor:** TPH-d, TPH-g, and benzene are identified as COCs in soil vapor beneath 127A and 127B.

Primary screening levels for soil and groundwater are the Presidio Cleanup Levels (CUL) from the *Presidio-Wide Cleanup Levels* document (EKI, 2002), as amended, and RWQCB Tier 1 ESLs (RWQCB, 2019c). Secondary screening levels include Residential ESLs for soil and Maximum Contaminant Level (MCL) Priority ESL for groundwater. The secondary screening levels are utilized to further evaluate exceedances of the Tier 1 ESLs.

3.0 SITE INVESTIGATION ACTIVITIES

The supplemental investigation activities were performed to assess the extent of soil and groundwater impacts surrounding Buildings 127A, 127B, and 128A between June 4 and July 6, 2018.

3.1 Pre-field Activities

Prior to beginning field work, a Dig Permit was obtained from the Presidio Trust for the installation of the soil borings and groundwater monitoring wells. Soil boring locations were marked with stakes, flagging, and paint as appropriate and Underground Services Alert (USA) was notified over three (3)-working days ahead of commencing work at the site. The USA ticket was maintained through the duration of the supplemental investigation work.

Site investigation activities were conducted in accordance with the site-specific HASP (TRC, 2017b). The HASP establishes responsibilities, procedures and contingencies to ensure the health and safety of TRC employees, contractors, visitors and the public while performing investigation and remediation activities for the Site and was maintained onsite during the supplemental investigation. Each day of field work, a “tailgate” meeting was conducted with all workers to discuss the health and safety issues and concerns related to the specific scope of work on that day.

3.2 Soil Investigation

The soil investigation activities were conducted between June 4 through June 6 and June 25 through June 28, 2018. Investigation work was stopped on June 6 due to conflicts with a scheduled event that required stoppage of work. The Trust informed the RWQCB of the work stoppage via email on June 6 (TRC, 2018f) Investigation work was resumed on June 25, 2018. Soil investigation included installation of fourteen (14) soil borings and soil sample collection for laboratory analysis. Soil borings were installed by Penecore Drilling (Penecore) of Woodland, California under supervision of TRC.

The locations of the soil borings installed during this supplemental investigation and previous investigations are shown on **Figures 3A** and **Figure 3B**. All soil sampling work was completed in accordance with the *Presidio-Wide Quality Assurance Project Plan* (QAPP; Tetra Tech, 2001) and current regulatory requirements.

3.2.1 Soil Boring Installation

- 1) Eleven (11) borings were installed around Buildings 127A & 127B and three (3) soil borings were installed around Building 128A, totaling to fourteen (14) soil borings installed during the supplemental investigation.
- 2) Eleven (11) soil borings (BR11-1SB010 through BR11-1SB020) were installed using a track-mounted Geoprobe® 8040DT drill rig equipped with 2.25-inch direct push drive casings to approximate depths of 35 ft bgs (soil borings designed with soil samples only), 50 ft bgs (soil borings designed with soil and grab groundwater samples), or first encountered groundwater whichever was shallower. The soil boring locations were selected to determine the lateral and vertical extents of soil and groundwater impacts around the buildings.
 - a. BR11-1SB010 through 014 targeted Building 127B southeast area towards Riley Avenue and southwest area next to the sunroom.
 - b. BR11-1SB015 through 018 targeted Building 127A northeast area next to the sunroom and towards Riley Avenue.
 - c. BR11-1SB019 and 020 targeted Building 128 north and northeast area next to the sunroom.
- 3) Three (3) soil borings (BR11-1GW001 through BR11-1GW-003) were initially installed using the same track-mounted Geoprobe® 8040DT drill rig and 2.25-inch direct push drive casings and subsequently over drilled using a six (6)-inch hollow stem auger (HAS) casings and completed as groundwater monitoring wells. Installed boring locations are as follows:
 - a. BR11-1GW001 was installed northeast of previous investigation boring SB004 where the deepest soil contamination (27 ft bgs) had been reported.
 - b. Soil boring BR11-1GW002 was installed southeast of Building 128A in the front yard near the alignment of the former fuel oil line lateral.
 - c. Soil boring BR11-1GW003 was installed to assess potential impacts to the north of Building 127A.

-
- d. Groundwater monitoring well installation details are presented in Subsection 3.3.

The total boring depth varied from 45 ft bgs (BR11-1GW003) to 60 ft bgs (BR11-1GW002) and was based on the encountered depth to groundwater, which varied between 23 and 57 ft bgs. Please consult **Table 1** and the well construction logs included as **Attachment A** for more detail.

- 4) Soil borings not completed as monitoring wells were abandoned by backfilling with neat cement grout to within one (1) foot of the surface and then filled with material matching surrounding grade (top soil).
- 5) Soil borings were logged using Unified Soil Classification System (USCS) designations during drilling and screened using a photoionization detector (PID). Soil boring logs are included as **Attachment A**.

3.2.2 Soil Sampling and Analyses

- 1) Soil samples were collected as follows:
 - a. Representative of 3, 5, 7, 10-ft bgs and every five (5) ft thereafter at each boring until termination depth.
 - b. One (1) additional sample was collected between the sampling intervals described above: SB-010[17.5] was collected from 17.5 ft bgs at boring SB-010. Visually stained soil with an elevated photoionization detector (PID) response was observed at this interval.
- 2) Soil Sample Collection
 - a. Soil samples from 5-ft or shallower depths were collected using a hand-auger.
 - b. Samples deeper than 5-ft were collected using clear acetate lined cores retrieved by the push rig.
 - c. The soil samples for TPH-g analysis were collected using U.S. Environmental Protection Agency (EPA) field preservation Method 5035 using Terra Core™ samplers and placed in laboratory-supplied volatile organic analysis (VOA) vials: one (1) containing methanol as a preservative, the other two (2) containing deionized water.
 - d. The soil samples for TPH-d and total petroleum hydrocarbon as motor oil (TPH-mo) analysis were collected using unpreserved, four (4)-ounce, wide-mouth jars with Teflon® lined lids.
 - e. The samples were labeled, sealed in a plastic bag, and stored in an iced-chilled cooler before transport to the analytical laboratory. Collected soil samples were transported to Enthalpy Analytical (Enthalpy) in Berkeley, California, under chain-of-custody protocols.
 - f. Field duplicates were collected at a frequency of one (1) duplicate for every 10 samples collected.
- 3) Soil Samples were analyzed for the following COCs:

-
- a. TPH-g, TPH-d without silica gel cleanup (SGC) and TPH-mo by EPA Test Method 8015.
 - b. All results were reported by the laboratory on a dry weight corrected basis.

3.2.3 Deviations from Work Plan

Unanticipated conditions encountered during the course of the soil investigation required certain elements of the work plan be modified, as follows:

- While drilling BR11-1SB014 the drill rig encountered refusal at 26 ft bgs. This boring was designed to extend to 50 ft bgs. Since this could not be accomplished in the field, nearby BR11-1SB013 was extended to 50 ft bgs to obtain deeper resolution of the subsurface.
- Boring BR11-1GW03 was designed to extend to 50 ft bgs but was only advanced to 45 ft bgs due to groundwater being encountered shallower than anticipated.
- Boring locations were shifted where needed to avoid marked utility lines, but did not affect the overall spatial resolution of the investigation
- Suspension of PAHs and benzene, toluene, ethylbenzene, and xylenes (BTEX) soil analysis was approved by RWQCB in an email dated May 3, 2018 (RWQCB. 2018c), and prior to implementation of the field work.

3.3 Groundwater Investigation

During the installation of the eleven (11) soil borings, grab groundwater samples were collected from borings BR11-1SB012, BR11-1SB015, and BR11-1SB017. Grab groundwater collection was conducted by advancing the boring five (5) ft beyond the encountered groundwater and placing temporary perforated well casing in the open boring. The groundwater was allowed to recharge and stabilize within the temporary well, a depth to water measurement was collected, and a grab groundwater sample collected using disposable tubing equipped with an inertially activated check valve and laboratory supplied containers.

Grab groundwater samples were analyzed for the following COCs:

- c. TPH-g, TPH-d without SGC and TPH-mo by EPA Test Method 8015
- d. BTEX by EPA Test Method 8021
- e. PAHs by EPA Test Method 8270

In addition to the grab groundwater samples, three (3), 2-inch groundwater monitoring wells BR11-1GW001, BR11-1GW002, and BR11-1GW003 were installed, developed, and sampled during the investigation. Installed groundwater monitoring well locations are shown on **Figure 4**. As determined using water table elevations from the installed wells, groundwater flows to the northeast across the Site at a calculated gradient of 0.35 ft/ft during both July 6 and October 3, 2018 sampling events.

3.3.1 Groundwater Well Installation

Groundwater monitoring well installation was conducted on June 25 and 26, 2018. Wells were installed following the advancement of their associated direct push soil borings. Soil borings were advanced using direct push drilling methods until refusal was encountered or approximately five (5) ft past encountered groundwater. Following the completion of each direct push boring, well installation was conducted using the Geoprobe® 8040DT rig equipped with a six (6)-inch diameter hollow stem auger (HSA) casings. The direct push borings were over-drilled using the HSA casing until groundwater was encountered if not already done so during the direct push drilling. Each boring was drilled approximately five (5) ft past first encountered groundwater and the well assembly was installed within the hollow stem of the emplaced augers. Groundwater well installation was performed by Penecore under TRC supervision.

The installed groundwater monitoring well assemblies consist of nominal 2-inch diameter PVC blank (riser) casing and 15 ft of factory pre-packed slotted casing consisting of 0.010-inch slotted casing surrounded by 20/40 mesh sand, encased in a stainless-steel mesh, and approximately 3.4 inches outside diameter (Geoprobe® pre-packed screen). The annular space around the wells was filled with #2/12 sand to two (2) ft above the top of each pre-packed well screen, followed by two (2) ft of hydrated bentonite chips, and neat cement grout to near surface. Each wellhead was sealed with a watertight, lockable well cap. A flush-mounted, eight (8)-inch diameter, traffic-rated well box was installed over each wellhead. Well construction details are presented in **Table 1** and the well construction logs included as **Attachment A**.

3.3.2 Groundwater Well Development

On June 29, 2018, TRC developed the monitoring wells using a combination of surging and purging with a 2-inch Grundfos® MP1-2 submersible pump with controller and a flow-through cell equipped with a YSI 556 MPS multi-meter. Development was conducted at each well until field water quality measurements (pH, oxidation/reduction potential [ORP], electrical conductivity [EC], temperature, turbidity, and dissolved oxygen [DO]) exhibited stability or a minimum of ten (10) well volumes were purged from the well as recharge conditions allowed. Field parameters were documented on well development records, which are included in **Attachment B**.

3.3.3 Groundwater Well Baseline Sampling and Analysis

The groundwater samples were sampled twice, once on July 6, 2018, following a minimum rest period of 48 hours after development, and again in October 3, 2018. During each sampling event, each well was probed for groundwater depth, the presence of oil, purged using a low-flow method, and sampled for laboratory analysis. Prior to measuring depths to water with an oil/water interface probe, the water levels were allowed to equilibrate such that two (2) consecutive measurements within ± 0.05 ft were achieved. No product was detected prior or during the sampling event. Measured depth to groundwater and calculated elevations are presented in **Table 2**.

Wells BR11-1GW01 and BR11-1GW03 were purged under low-flow protocols using a 2-inch Grundfos® MP1-2 submersible pump with controller and a flow-through cell equipped with a YSI 556 MPS multi-meter. Initial purging of BR11-1GW02 well was conducted using the submersible pump. However, due to a relatively small amount of water (3-ft column) at BR11-1GW02 and minimal observed recharge, only one purge volume and set of water quality parameters were able to be collected before sampling the well during each sampling event. During purging, the following field measurements were documented on groundwater sampling records included in **Attachment B**:

- pH
- ORP
- EC
- temperature
- turbidity
- DO

Purging proceeded until measured parameters stabilized (i.e., three [3] consecutive purged water quality parameters within approximately 10 percent of each other) or a total of three calculated purged volumes had been removed. For low yielding well BR11-1GW02, the well was purged once to dryness per QAPP protocols. Following purging, groundwater samples were collected from each well into laboratory-provided containers using the low-flow purging equipment. Samples were labeled with unique identifiers and collection time, and then stored in an ice-chilled cooler until a courier arrived onsite for delivery to the laboratory.

Samples were transported to Enthalpy under chain-of-custody protocols and analyzed for:

- TPH-g by EPA Test Method 8015
- TPH-d and TPH-mo with and without SGC by EPA Test Method 8015
- BTEX by EPA Test Method 8021
- PAHs by EPA Test Method 8270
- Total dissolved solids by SM 2540C

Next groundwater monitoring events are scheduled for January and April 2019.

3.3.4 Groundwater Monitoring Well Survey

Towill, a California-licensed land surveyor, surveyed the northings and eastings, and elevation of installed soil borings and top of the casing of installed groundwater monitoring wells on July 6, 2018. The coordinate surveyed was conducted based on the California State Plane Coordinate System of 1983 (CCS83), Zone 3. The elevation survey was based on the North America Vertical Datum of 1988 (NAVD 88). Well survey information is presented in **Table 1**. A copy of the survey plan is included in **Attachment E**.

3.3.5 Deviations from Work Plan

Unanticipated conditions encountered during the course of the groundwater investigation required certain elements of the work plan be modified, including:

- Grab groundwater samples were intended to be collected from BR11-1SB014 and BR11-1SB020, but groundwater was not encountered during the advancement of these borings.
- The wells designated as BR11-1GW02 and BR11-1GW03 in the *Supplemental Work Plan* were re-designated as BR11-1GW03 and BR11-1GW02, respectively. Installed BR11-1GW01 is in the front yard of Building 127B, installed BR11-1GW02 is in the front yard of Building 128A, and installed BR11-1GW03 is in the backyard of Building 127A.

3.4 Investigation Derived Waste

Drilling equipment was decontaminated with a pressure washer prior to drilling work at each soil boring location. Decontamination water, soil cuttings generated during soil boring and well installations, and purged water from well development and sampling were containerized in 55-gallon drums and transported to the Presidio Central Magazine storage area pending transportation and off-site disposal facility. Nine (9) drums containing soil and three (3) drum containing water were transported and disposed off-site as non-hazardous waste by Big Sky Enterprises at their facility in Benicia, California. A copy of the non-hazardous waste manifest is included as **Attachment C**.

4.0 ANALYTICAL RESULTS

TPH-d is the primary COC detected in collected soil and groundwater samples above current Tier 1 ESLs. TPH-d detections above ESL were reported in soil samples from three soil borings, three grab groundwater samples, and one monitoring well sample. Analytical results from collected soil samples are summarized in **Table 3** and **Table 4**, groundwater results are summarized in **Table 5** and **Table 6**, and laboratory reports associated with the investigation are included as **Attachment D**.

4.1 Soil Analytical Results

At the southeastern corner of Building 127B, soil samples from boring BR11-SB010 had reported TPH-d concentrations exceeding the Tier 1 and Residential ESL of 230 mg/kg, ranging from 2,200 to 18,000 mg/kg in samples collected between 5 and 25 ft bgs. Samples collected at 30 and 35 ft bgs were below reporting limits or below the ESL, respectively. TPH-g was also detected exceeding the Tier 1 ESL of 100 mg/kg, but below Residential ESL of 740 mg/kg, ranging from 120 to 170 mg/kg in samples collected from 15 to 20 ft bgs. Similar to TPH-d detections, the TPH-g detections quickly drop to non-detect in subsequent samples down to 35 ft bgs. Soil samples to the west, south, and east of BR11-SB010, collected during the investigation contained no detections of TPH-d exceeding the Tier 1 ESL at any of the collected depths. Soil samples from boring BR11-

SB018 to the north had reported TPH-d concentrations ranging from 980 to 2,200 mg/kg between 7 and 15 ft bgs, detected concentrations were below ESLs from 20 to 35 ft bgs (total boring depth). The final TPH-d detection above Tier 1 ESL was reported at BR11-1SB016, to the northeast of Building 127A, in its soil sample from 15 ft bgs at concentration of 290 mg/kg. TPH-d results of soil samples collected at 3 ft bgs from these three boring locations (BR11-SB010, BR11-SB016, and BR11-1SB010) were all below Tier 1 ESL. The remaining soil samples collected during the investigation, to the north, northeast, and east of Building 128A, reported estimated TPH detections below reporting limits through the entire boring depth. Soil analytical results are presented in **Figures 3A and 3B** and **Tables 3 and 4**.

4.2 Groundwater Analytical Results

TPH-d concentrations exceeding the Tier 1 ESL of 100 µg/L were found in groundwater encountered between 27 and 57 ft bgs to the southeast and northeast of Building 127A and southeast of Building 128A. Grab water samples from this investigation with TPH-d results in excess of the Tier 1 ESL include samples BR11-1SB012(W) (140 µg/L at 24 ft bgs), BR11-1SB015(W) (130 µg/L at 39.5 ft bgs), BR11-1SB017(W) (470 µg/L at 39 ft bgs). Reported TPH-d concentrations in groundwater monitoring well ranged from 24 µg/L (estimated detection) to 66 µg/L in BR11-1GW01, non-detect (<50 µg/L) to 230 µg/L in BR11-1GW02, and 50 µg/L to 130 µg/L in BR11-1GW03. TPH-d detections were non-detect (<50 µg/L) for samples analyzed using silica gel cleanup (SCG). The TPH-d detections are attributed to biogenic hydrocarbons or petroleum metabolites and a further review of the TPH-d detection is presented in Section 5.2.

A TPH-g concentration of 110 µg/L was reported above the Tier 1 ESL of 100 µg/L (Odor Nuisance) but below the MCL Priority screening levels of 220 µg/L in grab groundwater sample BR11-1SB012(W) as was a TPH-mo concentration of 360 µg/L above the MCL Priority screening level of 150 µg/L. No other TPH-g or TPH-mo reported detections exceeded screening levels.

Naphthalene was detected at a concentration of 0.40 µg/L at BR11-1SB012(W) and 0.20 µg/L at BR11-1SB017(W), above the Tier 1 and MCL Priority ESL of 0.17 µg/L. No other PAHs were detected at concentrations exceeding respective ESLs.

Total dissolved solids results for samples collected from groundwater wells ranged from 420 mg/L to 960 mg/L and are within the range of secondary MCL of 500 to 1,000 mg/L.

Groundwater analytical results are presented in **Figure 4** and in **Table 5** and **Table 6**.

5.0 SOIL AND GROUNDWATER IMPACTS DELINEATION

The detected TPH-d and TPH-g concentrations in soil and groundwater above the Tier 1 ESL as described in Section 4 indicate residual impacts of the fuel oil release from Section BR11-1 are limited to beneath buildings 127A and 127B, their front yards, and beneath 128A along the alignment of the former FDS lateral.

5.1 Soil Impact Delineation

The vertical and lateral extent of residual soil impacts for each building is as follows:

- **Building 127A:**

- **Soil:** The lateral extent of residual soil impacts above Tier 1 ESL are confined to beneath the building footprint and to the southwest (front yard) along the former FDS lateral. The lateral extents of residual soil impacts in the front yard are bounded by borings SB016 and SB017, to the northeast by SB015 and to the north by GW03 with low or estimated TPH-d detections through the entire depth of the borings. The vertical extent of TPH-d impacts within the defined lateral extents is from 5 to 20 ft bgs. Cross-sections have been created for the subsurface lithology below Building 127A; please see **Figure 3A** for an aerial extent of soil impacts and **Figure F-1** and **F-3 (Attachment F)** for a transect and cross-section, respectively, which show the vertical extent of soil impacts.

- **Building 127B:**

- **Soil:** The lateral extent of residual soil impacts above Tier 1 ESL are confined to beneath the building footprint and to the southeast (front yard) along the former FDS lateral. The lateral extents of residual TPH-d and TPH-g soil impacts in the front yard are bounded by borings SB007, SB011, SB012, and GW01, to the south by SB013, and to the southwest and west by SB005 and SB014 with low or estimated TPH-d and estimated TPH-g detections through the entire depth of the borings. The vertical extent of TPH-d impacts within the defined lateral extents is from 5 to 30 ft bgs and TPH-g from 15 to 20 ft bgs. Based on ground water monitoring data, the residual soil contamination southeast of the building does not appear to be mobile nor has resulted in groundwater impacts beyond the localized impacts detected in grab sample SB004. Please see **Figure 3A**, which includes the aerial extent of soil impacts and includes borings 127BEX115 and 127BEX102. In addition, see **Figures F-1** and **F-2** for a transect and cross-section, respectively, which show the vertical extent of soil impacts.

- **Building 128A:**

- **Soil:** The lateral extent of residual soil impacts above Tier 1 ESL are confined to beneath the building footprint and along the abandoned-in-place FDS lateral. Soil borings SB009 to the west, SB019 to the north, SB020 to the northeast, and GW02 to the southeast along the former FDS lateral contained estimated TPH-d concentration through the entire depth of the boring. The vertical extent of TPH-d impacts beneath the building concrete foundation are from 1 to over 6 ft bgs. Please see **Figure 3B** for an aerial extent of soil impacts and **Figure F-1** and **F-3** for a transect and cross-section, respectively, which show the vertical extent of soil impacts.

- **Tank 127:**

- **Soil:** The tank was removed in 1978 and received a NFA from the RWQCB in 2013. The NFA concurrence was based on a review of historical records and observations during renovations of the building and landscape areas conducted over the years since the tank was removed - all indicating no significant residual petroleum impacts in the vicinity of the former Tank 127. This conclusion is further supported by soil and groundwater investigations conducted to date. Of note, a soil sample collected by the Army during FDS removal resulted in a low of 8.1 mg/kg TPH-d as documented in the May 1999 IT FDS Closure Report, Volume III. in. The soil sample was collected from a depth of 6 feet below ground surface, at the southwest end of the former FDS segment BR11-1 and adjacent to the former Tank 127 location. Furthermore, the recent investigation results for soil borings southwest of Building 127B (BR11-1SB011, BR11-1SB012, and SB007), between the former Tank 127 location and the identified impacts in the front yard, were all reported below the current Tier 1 ESLs for TPH-g, TPH-d, and TPH-mo. Similarly, grab groundwater results from BR11-1SB012 for TPH-g and TPH-d are within those considered to be naturally organic compounds. These results indicate that potential historic impacts from the former UST are limited in extent and have not migrated to these sample locations.

Soil investigation results did not indicate the existence of additional sources of contamination aside from the already identified FDS lateral. No identified soil impacts reach known storm drain utility lines located at the Site. Known storm drain utility lines at the Site and surrounding areas are presented in **Figure 5**.

5.2 Groundwater Impact Delineation

Analytical results for grab and monitoring well groundwater samples collected during the supplemental investigation in July 2018 and subsequent quarterly sampling in October 2018 showed minor TPH-d, TPH-g and TPH-mo detections in the groundwater beneath the Site. To further investigate the nature of reported TPH-d detections in installed monitoring wells, the collected groundwater samples were analyzed using SGC with non-detect (<50 µg/L) results for all analysis. Review of laboratory chromatograms of non-SGC TPH-d analysis for monitoring well samples exhibited a notable absence of an unresolved complex mixture (UMC) typical of petroleum hydrocarbon mixtures with detections in each fraction reported were due to select peaks and not pattern of peaks expected for petroleum hydrocarbons. Similarly, the non-SGC TPH-d reported detections in the grab groundwater samples were qualified by the laboratory as exhibiting unknown single peaks with chromatograms not resembling standard. Based on the results using SGC and review of the laboratory data, reported detections of TPH-d in collected grab and monitoring well samples do not appear to be petroleum hydrocarbon and are likely due to naturally occurring biogenic hydrocarbons or petroleum metabolites. The initial groundwater monitoring well results and analysis indicate that groundwater beneath the Site has not been significantly affected by petroleum hydrocarbons from the historic fuel oil release

beyond the localized impacts southeast of Building 127B. Currently, the reported TPH-d, TPH-g and naphthalene in groundwater in excess of MCL Priority screening levels do not represent a threat to human health and are below their respective Aquatic Habitat Goal ESLs. Groundwater quality will continue to be monitored during quarterly groundwater monitoring sampling events scheduled for January and April 2019. See **Figure 4** for an aerial extent of groundwater impacts, analytical results presented in call-out tables for each location sampled, and a potential NAPL zone along the transect of the historic FDS line southwest of Building 127B; the analytical data presented on the figure includes TPH-d, TPH-g, TPH-mo, and TPH-bc.

In summary, the groundwater investigations concluded the COC impacts reported above Tier 1 ESLs are limited to TPH-d at locations SB004 and GW01. Although TPH-d was detected in samples from several other downgradient well locations (e.g. GW02, GW03, SB015, and SB017), based on technical reviews of the sample chromatographs (and with concurrence from the RWQCB's Technical Specialist), the analytical results indicate the TPH-d concentrations are due to natural background/biogenic sources, rather than releases from the former FDS; these results are referenced on Figure 4 by the use of superscripts "Y" and "Z" to denote the source.

As mentioned previously, the first encountered groundwater in the vicinity of SB004 and adjacent monitoring well GW01 likely represents a localized zone of perched groundwater at approximately 23 to 27 feet below ground surface (fbg). Borings 20 to 25 feet east and southeast (SB013 and SB014) of SB004 did not encounter the perched groundwater body. Likewise, borings performed on the north side of Building 127 did not encounter groundwater until approximately 34 fbg at GW03, and approximately 41 fbg at SB015 and SB017. This suggests that the perched groundwater near SB004 is limited in extent. These observations also support the conclusion that residual TPH observed at SB004 is not mobile. TPH-impacted groundwater is not likely to travel within the upper, weathered bedrock beneath the total depth of SB017 and SB015 because significant TPH impacts are not observed at well GW03, which is screened across the contact with the Franciscan Complex bedrock. Well GW03 is also located due north of SB004, which is in the direction of the regional groundwater flow. Furthermore, the weathered bedrock that was encountered in borings SB010, SB012, and SB013, and wells GW01 and GW03 contained low permeability clays within the fractures, which is not conducive to groundwater flow.

Contaminant transport from perched, secondary source groundwater, such as at locations SB004 and SB010, have not been observed to be migrating down through the vadose zone to the sand-bedrock interface, and ultimately down-gradient along the north-sloping interface. This potential contaminant transport pathway does not appear to be complete because significant TPH impacts have not been detected in wells GW02 and GW03, which are screened downgradient along the north-sloping bedrock interface and would likely intercept the migration of contaminated secondary source groundwater from perched locations such as SB004 and SB010.

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the supplemental investigation results, along with previously conducted investigations, the following conclusions and recommendations with respect to the TPH-d release associated with the FDS line are presented:

- The lateral and vertical extent of COCs in soil has been determined.
- Residual TPH-d in soil in the interior of building 127B does not currently represent a human health risk as a minimum of one (1) foot of clean soil has already been placed over impacted soil and the basement is secured and not accessible to the public. Future risk will be mitigated by the reconstruction of the concrete basement floor as a barrier to isolate the impacted soil eliminating direct contact.
- Residual TPH-d in soil beneath Buildings 127A (presumed) and 128A does not represent a human health risk as the existing concrete basement floor prevents direct contact by future and current tenants.
- Residual TPH-d in soil exterior to 127A and 127B does not present a human health risk as they are located at depth (starting at 5 ft bgs) and generally are not accessible to human contact. Soil intrusion activities such as digging and planting by residents are prohibited per lease agreements. Maintenance work involving soil disturbance by the Trust or others is subject the Trust Dig Permit review and approval process.
- Residual TPH-d in soil appears to be localized, not mobile, and resulted in only localized groundwater impacts southeast of Building 127B.
- The lateral and vertical extent of COCs in groundwater has been determined.
- Groundwater impacts have been delineated and are limited to perched lenses in the vicinity of SB004 and GW01.
- Migration of impacted source and secondary source groundwater is limited due to discontinuous and/or perched groundwater bodies.
- Groundwater detections during the supplemental investigation consisted of petroleum metabolite and/or biogenic hydrocarbon.

The soil investigation results have effectively defined the extents of impacts to the southeast of Buildings 127A and 127B and confirm no soil impacts southeast of Building 128A. The proposed remedial action to address the identified soil impact is capping and implementation of institutional controls (i.e., land use control or land used notification area) and administrative controls for in-place management. A description of the proposed remedy to address soil impacts and potential soil vapor intrusion will be presented in a

Feasibility Study/Corrective Action Plan currently under preparation and to be submitted under separate cover.

Groundwater investigation results reported TPH-d as the primary COC petroleum-based contaminant reported above Tier 1 ESLs; reported at locations SB004 and GW01. Although TPH-d was detected in samples from several other downgradient well locations (e.g. GW02, GW03, SB015, and SB017), based on technical reviews of the sample chromatographs, the analytical results indicate the elevated TPH-d concentrations are due to natural background/biogenic sources, rather than releases from the former FDS; these results are referenced on Figure 4 by the use of superscripts “Y” and “Z” to denote the source.

The single and minor detections of TPH-g and naphthalene during the supplemental investigation do not represent a significant impact to groundwater quality. Groundwater quality long term trend and seasonal variations will continue to be assessed via the installed groundwater wells BR11-1GW01, BR11-1GW02 and BR11-1GW03 during future groundwater sampling events with an expected annual frequency.

Although no free product was collected or sampled, it was noted as a possible observation in the boring log for SB010 and based on elevated concentrations of TPH-d at locations SB004 and SB010, the likelihood for non-aqueous phase liquids (NAPL) to exist in the vicinity of these locations is possible. Additional groundwater monitoring will continue to monitor for the possible presence of free product.

Site closure is not being requested at this time. Further evaluations of groundwater impacts will continue via periodic monitoring at existing monitoring wells BR11-1GW01, BR11-1GW02 and BR11-1GW03.

The next phase of work for the site is to complete a Feasibility Study/Corrective Action Plan, which will focus on evaluating corrective action alternatives to mitigate identified impacts, including secondary sources (groundwater, soil, and soil vapor) and ensure long-term protection of human health.

Notes:

Wells were installed using hallow stem auger rig.

Wells were constructed with Schedule (SCH) 80 polyvinyl chloride (PVC) casing with 15-foot 0.010 in. slot prepacked screens.

All borehole diameters are 6-inches.

All casing diameters are 2-inches.

Abbreviations:

ID = Identification

ft = Feet

NAD 83 = North American Datum of 1983, on California Coordinate System, Zone 3

NAVD 88 = North American Vertical Datum of 1988

BGS = Below ground surface

Notes:

Wells were installed using hallow stem auger rig.

Wells were constructed with Schedule (SCH) 80 polyvinyl chloride (PVC) casing with 15-foot 0.010 in. slot prepacked screens.

All borehole diameters are 6-inches.

All casing diameters are 2-inches.

Abbreviations:

ID = Identification

NAVD 88 = North American Vertical Datum of 1988

Soil Cleanup Level: Human Health Residential ^a			1030	1380	1900	0.6	840	530	1080	1080
RWQCB ESLs (Tier 1, February 2019) ^b			100	260	1600	0.025	0.43	3.2	2.1	2.1
RWQCB ESLs (Constr. Worker, February 2016) ^b			2800	880	32000	24	480	4100	2400	2400

Notes:

BOLD values indicates the concentration exceeds the cleanup level and/or the ESL.
Shading indicates that the non detected value is above the ESL.

Abbreviations:

- = not available
- <# = not detected above the laboratory reporting limit
- µg/L = micrograms per liter
- ftg = feet below ground surface
- mg/kg = milligrams per kilogram
- NA = not analyzed
- EPA = United States Environmental Protection Agency
- C = Presence confirmed, but RPD between columns exceeds 40%
- J = Estimated value
- Y = Sample exhibits chromatographic pattern which does not resemble standard

Footnotes:

- ^a Soil cleanup levels from Tables 7-2 and 7-5 and groundwater cleanup levels from Table 7-6 from EKI's 2002 (with updates through 2013) *Development of Presidio-Wide Cleanup Levels for Soil, Sediment, Groundwater, and Surface Water. Presidio of San Francisco.*
- ^b Tier 1 values from the San Francisco Regional Water Quality Control Board (RWQCB) January 2019 Revision 01 Environmental Screening Levels (ESLs). As per RWQCB ESLs Summary of Groundwater ESLs Table, the groundwater diesel value was used for the groundwater motor oil value since motor oil is not soluble.

Notes:

BOLD values indicates the concentration exceeds the cleanup level and/or the Tier 1 ESL.
Shading indicates that the non-detect value is above the Tier 1 ESL.

Abbreviations:

-- = not available
<# = not detected above the laboratory reporting limit
µg/L = micrograms per liter
fbg = feet below ground surface
mg/kg = milligrams per kilogram
NA = not analyzed
EPA = United States Environmental Protection Agency
ESL = Environmental Screening Level
MCL = Maximum Contaminant Level
C = Presence confirmed, but RPD between columns exceeds 40%
J = Estimated value
Y = Sample exhibits chromatographic pattern which does not resemble standard
Z = Sample exhibits unknown single peaks or peaks

CASE NARRATIVE

Laboratory number: 300379
Client: TRC Solutions
Project: 285830.02.01
Location: Riley Ave
Request Date: 06/05/18
Samples Received: 06/05/18

This data package contains sample and QC results for twenty one soil samples and two water samples, requested for the above referenced project on 06/05/18. See attached cooler receipt form for any sample receipt problems or discrepancies.

TPH-Purgeables and/or BTXE by GC (EPA 8015B and EPA 8021B) Water:

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 260228; this analyte was not detected in samples at or above the RL.

TB06042018 (lab # 300379-023) was analyzed with more than 1 mL of headspace in the VOA vial.

No other analytical problems were encountered.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Soil:

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 260199; this analyte was not detected in samples at or above the RL.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 260201; this analyte was not detected in samples at or above the RL.

No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Water:

No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Soil:

High surrogate recovery was observed for o-terphenyl in the MS of BR11-1SB012[15] (lab # 300379-005).

Diesel C10-C24 was detected between the MDL and the RL in the method blank for batch 260428.

No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):

No analytical problems were encountered.

Moisture (ASTM D2216-98/CLP):

No analytical problems were encountered.

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 300379

Client: TRC

Date Received: 6-4-18

Project: Riley Ave

Section 2: Samples received in a cooler? Yes, how many? 2 No (skip Section 3 below)

If no cooler Sample Temp (°C): _____ using IR Gun # A, or B

Samples received on ice directly from the field. Cooling process had begun

If in cooler: Date Opened 6-4-18 By (print) TKY (sign) TKY

Shipping info (if applicable) _____

Are custody seals present? No, or Yes. If yes, where? on cooler, on samples, on package

Date: _____ How many _____ Signature, Initials, None

Were custody seals intact upon arrival? Yes No N/A

Section 3: **Important : Notify PM if temperature exceeds 6°C or arrive frozen.**

Packing in cooler: (if other, describe) _____

Bubble Wrap, Foam blocks, Bags, None, Cloth material, Cardboard, Styrofoam, Paper towels

Samples received on ice directly from the field. Cooling process had begun

Type of ice used: Wet, Blue/Gel, None Temperature blank(s) included? Yes, No

Temperature measured using Thermometer ID: _____, or IR Gun # A B

Cooler Temp (°C): #1: 3.0, #2: 3.2, #3: _____, #4: _____, #5: _____, #6: _____, #7: _____

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	X		
Were Method 5035 sampling containers present?	X		
If YES, what time were they transferred to freezer? <u>1524</u>			
Did all bottles arrive unbroken/unopened?	X		
Are there any missing / extra samples?		X	
Are samples in the appropriate containers for indicated tests?	X		
Are sample labels present, in good condition and complete?	X		
Does the container count match the COC?	X		
Do the sample labels agree with custody papers?	X		
Was sufficient amount of sample sent for tests requested?	X		
Did you change the hold time in LIMS for unpreserved VOAs?			X
Did you change the hold time in LIMS for preserved terracores?	X		
Are bubbles > 6mm absent in VOA samples?		X	
Was the client contacted concerning this sample delivery?		X	
If YES, who was called? _____ By _____ Date: _____			

Section 5:	YES	NO	N/A
Are the samples appropriately preserved? (if N/A, skip the rest of section 5)			X
Did you check preservatives for all bottles for each sample?			
Did you document your preservative check?			
pH strip lot# _____, pH strip lot# _____, pH strip lot# _____			
Preservative added:			
<input type="checkbox"/> H2SO4 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HCL lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HNO3 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> NaOH lot# _____ added to samples _____ on/at _____			

Section 6:
 Explanations/Comments: sample 23 - 1/2 VOA arrived containing bubbles

Date Logged in 6-5-18 By (print) TKY (sign) TKY
 Date Labeled 6-5-18 By (print) TKY (sign) TKY

Detections Summary for 300379

Results for any subcontracted analyses are not included in this summary.

Client : TRC Solutions

CB1 06/13/18 : I verified that the vials loaded on the instrument matched the sequence data entry, for runs 1 through 30.

CB1 06/13/18 : Instrument stopped due to inlet pressure failure after position 30. RR last bracket.

SAMPLE PREPARATION SUMMARY

Batch # : 260379
 Started By : ALE
 Method : 3520C
 Spike #1 ID : S36867

Prep Date : 11-JUN-2018 13:57
 SOP Version : TEH_3520_rv16
 Spike #2 ID : S36488

Analysis : TEH
 Finished By : JCT
 Units : mL

 Comment 3: Prepped 12-JUN-2018 17:27; A/O AS1

CB1 06/12/18 : Matrix spikes were not performed for this analysis in batch 260379 due to insufficient sample amount.

WA1 06/12/18 : Please review NSG QCs for rush 300507 and 300519. SG QCs are still running.

EAH 06/12/18 : Re viewed for 300507 and 300519.

CB1 06/13/18 : Batch paperwork is done and all QC are run, please fully review.

BS/BSD-only (MS/MSD not included) due to: insufficient volume, or other (reason)

surrogate volume adjusted proportionally to sample volume

Checked pH with pH strips - lot #
 0.25/0.5/1.0 mL of TEH_SURR was added to all samples
 * 1.0 mL of TEH_SP was added to all spikes
 3520c: Samples were continually extracted about 450 mL of CH₂Cl₂
 Extraction Start Time: _____
 Extraction End Time: _____
 3510c: Samples were extracted 3 times with 60 mL of CH₂Cl₂
 Extracts filtered through baked, CH₂Cl₂-rinsed granular Na₂SO₄
 Concentrated to final volume in boiling water bath
 Relinquished to TEH Department

Balance ID: B-15 Has been calibrated? Yes No

Baked, solvent-rinsed granular Na₂SO₄ weighed out for QC samples
 Samples were dried with CH₂Cl₂-rinsed powdered Na₂SO₄
1.0 mL of Surrogate solution was added to all samples
1.0 mL of Spike solution was added to all spikes
 1:1 CH₂Cl₂ (lot# EMS3063):Acetone (lot# FC131819) was added to all
 Solvent added at (time) 9:43
 Sonicated 3 times w/ ≥100mL 1:1 DCM:Acetone
 Extracts filtered through baked, rinsed powdered Na₂SO₄
 Concentrated to final volume in boiling H₂O bath
 Relinquished to TEH Department

This data package has been reviewed for technical correctness and completeness. Release of this data has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature which applies to this PDF file as well as any associated electronic data deliverable files. The results contained in this report meet all requirements of NELAP and pertain only to those samples which were submitted for analysis. This report may be reproduced only in its entirety.

CASE NARRATIVE

Laboratory number: 300412
Client: TRC Solutions
Project: 285830.02.01
Location: Riley Avenue
Request Date: 06/05/18
Samples Received: 06/05/18

This data package contains sample and QC results for twenty four soil samples and one water sample, requested for the above referenced project on 06/05/18. See attached cooler receipt form for any sample receipt problems or discrepancies.

TPH-Purgeables and/or BTXE by GC (EPA 8015B and EPA 8021B) Water:

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 260228; this analyte was not detected in the sample at or above the RL.

No other analytical problems were encountered.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Soil:

Matrix spikes were not performed for this analysis in batch 260273 due to insufficient sample amount.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 260234; this analyte was not detected in samples at or above the RL.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 260273; this analyte was not detected in samples at or above the RL.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 260314; this analyte was not detected in the sample at or above the RL.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 260383; this analyte was not detected in the sample at or above the RL.

No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):

Diesel C10-C24 was detected between the MDL and the RL in the method blank for batch 260428; this analyte was not detected in samples at or above the RL.

Diesel C10-C24 was detected between the MDL and the RL in the method blank for batch 260530.

No other analytical problems were encountered.

CASE NARRATIVE

Laboratory number: 300412
Client: TRC Solutions
Project: 285830.02.01
Location: Riley Avenue
Request Date: 06/05/18
Samples Received: 06/05/18

Moisture (ASTM D2216-98/CLP):

No analytical problems were encountered.

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 300412
Date Received: 6-5-18

Client: TRC
Project: Kiley Avenue

Section 2: Samples received in a cooler? Yes, how many? 2 No (skip Section 3 below)

If no cooler Sample Temp (°C): _____ using IR Gun # A, or B

Samples received on ice directly from the field. Cooling process had begun

If in cooler: Date Opened 6-5-18 By (print) SP (sign) SP

Shipping info (if applicable) _____

Are custody seals present? No, or Yes. If yes, where? on cooler, on samples, on package

Date: _____ How many _____ Signature, Initials, None

Were custody seals intact upon arrival? Yes No N/A

Section 3: **Important : Notify PM if temperature exceeds 6°C or arrive frozen.**

Packing in cooler: (if other, describe) _____

Bubble Wrap, Foam blocks, Bags, None, Cloth material, Cardboard, Styrofoam, Paper towels

Samples received on ice directly from the field. Cooling process had begun

Type of ice used : Wet, Blue/Gel, None Temperature blank(s) included? Yes, No

Temperature measured using Thermometer ID: _____ or IR Gun # A B

Cooler Temp (°C): #1: 5.4, #2: 5.6, #3: _____, #4: _____, #5: _____, #6: _____, #7: _____

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	<input checked="" type="checkbox"/>		
Were Method 5035 sampling containers present?	<input checked="" type="checkbox"/>		
If YES, what time were they transferred to freezer? <u>13:10 6-6-18</u>			
Did all bottles arrive unbroken/unopened?	<input checked="" type="checkbox"/>		
Are there any missing / extra samples?		<input checked="" type="checkbox"/>	
Are samples in the appropriate containers for indicated tests?	<input checked="" type="checkbox"/>		
Are sample labels present, in good condition and complete?	<input checked="" type="checkbox"/>		
Does the container count match the COC?	<input checked="" type="checkbox"/>		
Do the sample labels agree with custody papers?	<input checked="" type="checkbox"/>		
Was sufficient amount of sample sent for tests requested?	<input checked="" type="checkbox"/>		
Did you change the hold time in LIMS for unpreserved VOAs?			<input checked="" type="checkbox"/>
Did you change the hold time in LIMS for preserved terracores?	<input checked="" type="checkbox"/>		
Are bubbles > 6mm absent in VOA samples?		<input checked="" type="checkbox"/>	
Was the client contacted concerning this sample delivery?		<input checked="" type="checkbox"/>	
If YES, who was called? _____ By _____ Date: _____			

Section 5:	YES	NO	N/A
Are the samples appropriately preserved? (if N/A, skip the rest of section 5)			<input checked="" type="checkbox"/>
Did you check preservatives for all bottles for each sample?			
Did you document your preservative check?			

pH strip lot# _____, pH strip lot# _____, pH strip lot# _____

Preservative added:

H2SO4 lot# _____ added to samples _____ on/at _____

HCL lot# _____ added to samples _____ on/at _____

HNO3 lot# _____ added to samples _____ on/at _____

NaOH lot# _____ added to samples _____ on/at _____

Section 6:

Explanations/Comments: sample 24 - 1/2 VOA arrived containing bubble

Date Logged in 6/6/18

By (print) VSR (sign) VSR

Date Labeled 6-6-18

By (print) TKY (sign) TKY

JM2 06/08/18 : Voided runs 5,7, removed samples from the batch.

JM2 06/08/18 : Partial sequence for 300480.

JM2 06/08/18 : All pdfs and idfs accounted for.

JM2 06/08/18 : I verified that the vials loaded on the instrument matched the sequence data entry, for runs 1 through 12.

LW 06/08/18 : Reviewed through file 12

CJN 06/11/18 : I verified that the vials loaded on the instrument matched the sequence data entry, for runs 13 through 34.

CB1 04/25/18 : I verified that the vials loaded on the instrument matched the sequence data entry, for runs 1 through 81.

CB1 04/23/18 : Hardware failure (bent syringe) for run at position 4, RR DSL opening CCV.

WA1 04/23/18 : Position 11 was mis-injected.

Balance ID: B-15 Has been calibrated? Yes No

Mfg & Lot # / LIMS # / Time Date/Initials

Baked, solvent-rinsed granular Na₂SO₄ weighed out for QC samples
 Samples were dried with CH₂Cl₂-rinsed powdered Na₂SO₄
 1.0 mL of Surrogate solution was added to all samples
 1.0 mL of Spike solution was added to all spikes
 1:1 CH₂Cl₂ (lot# FM58068):Acetone (lot# FC181819) was added to all
 Solvent added at (time) 140
 Sonicated 3 times w/ ≥100mL 1:1 DCM:Acetone
 Extracts filtered through baked, rinsed powdered Na₂SO₄
 Concentrated to final volume in boiling H₂O bath
 Relinquished to TEH Department

Mfg & Lot # / LIMS # / Time Date/Initials

Baked, solvent-rinsed granular Na₂SO₄ weighed out for QC samples

Samples were dried with CH₂Cl₂-rinsed powdered Na₂SO₄

1.0 mL of Surrogate solution was added to all samples

1.0 mL of Spike solution was added to all spikes

1:1 CH₂Cl₂ (lot# EM8068):Acetone (lot# FC181819) was added to all

Solvent added at (time)

Sonicated 3 times w/ >100mL 1:1 DCM:Acetone

Extracts filtered through baked, rinsed powdered Na₂SO₄

Concentrated to final volume in boiling H₂O bath

Relinquished to TEH Department

CASE NARRATIVE

Laboratory number: 300453
Client: TRC Solutions
Project: 285830.02.01
Location: Riley Avenue
Request Date: 06/06/18
Samples Received: 06/06/18

This data package contains sample and QC results for twenty two soil samples and three water samples, requested for the above referenced project on 06/06/18. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B and EPA 8021B) Water:

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 260388; this analyte was not detected in samples at or above the RL.

No other analytical problems were encountered.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Soil:

High surrogate recoveries were observed for bromofluorobenzene (FID) in BR11-1SB016[15] (lab # 300453-019) and DUP06062018-01 (lab # 300453-024).

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 260316; this analyte was not detected in samples at or above the RL.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 260383.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 260513; this analyte was not detected in samples at or above the RL.

No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Water:

No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Soil:

Diesel C10-C24 was detected between the MDL and the RL in the method blank for batch 260530; this analyte was not detected in samples at or above the RL.

No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):

No analytical problems were encountered.

Moisture (ASTM D2216-98/CLP):

No analytical problems were encountered.

Chain of Custody

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 300453
Date Received: 6-6-18

Client: TRC
Project: Piley Avenue

Section 2: Samples received in a cooler? Yes, how many? 2 No (skip Section 3 below)

If no cooler Sample Temp (°C): _____ using IR Gun # A, or B

Samples received on ice directly from the field. Cooling process had begun

If in cooler: Date Opened 6-6-18 By (print) [Signature] (sign) [Signature]

Shipping info (if applicable) _____

Are custody seals present? No, or Yes. If yes, where? on cooler, on samples, on package

Date: _____ How many _____ Signature, Initials, None

Were custody seals intact upon arrival? Yes No N/A

Section 3: **Important : Notify PM if temperature exceeds 6°C or arrive frozen.**

Packing in cooler: (if other, describe) _____

Bubble Wrap, Foam blocks, Bags, None, Cloth material, Cardboard, Styrofoam, Paper towels

Samples received on ice directly from the field. Cooling process had begun

Type of ice used: Wet, Blue/Gel, None Temperature blank(s) included? Yes, No

Temperature measured using Thermometer ID: _____, or IR Gun # A B

Cooler Temp (°C): #1: 1.6, #2: 4.0, #3: _____, #4: _____, #5: _____, #6: _____, #7: _____

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	<input checked="" type="checkbox"/>		
Were Method 5035 sampling containers present?	<input checked="" type="checkbox"/>		
If YES, what time were they transferred to freezer? <u>15:40</u>			
Did all bottles arrive unbroken/unopened?	<input checked="" type="checkbox"/>		
Are there any missing / extra samples?		<input checked="" type="checkbox"/>	
Are samples in the appropriate containers for indicated tests?	<input checked="" type="checkbox"/>		
Are sample labels present, in good condition and complete?	<input checked="" type="checkbox"/>		
Does the container count match the COC?	<input checked="" type="checkbox"/>		
Do the sample labels agree with custody papers?	<input checked="" type="checkbox"/>		
Was sufficient amount of sample sent for tests requested?	<input checked="" type="checkbox"/>		
Did you change the hold time in LIMS for unpreserved VOAs?			<input checked="" type="checkbox"/>
Did you change the hold time in LIMS for preserved terracores?	<input checked="" type="checkbox"/>		
Are bubbles > 6mm absent in VOA samples?	<input checked="" type="checkbox"/>		<input checked="" type="checkbox"/>
Was the client contacted concerning this sample delivery?		<input checked="" type="checkbox"/>	
If YES, who was called? _____ By _____ Date: _____			

Section 5:	YES	NO	N/A
Are the samples appropriately preserved? (if N/A, skip the rest of section 5)			<input checked="" type="checkbox"/>
Did you check preservatives for all bottles for each sample?			
Did you document your preservative check?			

pH strip lot# _____, pH strip lot# _____, pH strip lot# _____

Preservative added:

H2SO4 lot# _____ added to samples _____ on/at _____

HCL lot# _____ added to samples _____ on/at _____

HNO3 lot# _____ added to samples _____ on/at _____

NaOH lot# _____ added to samples _____ on/at _____

Section 6:

Explanations/Comments: _____

Date Logged in 6-6-18 By (print) TKY (sign) [Signature]

Date Labeled 6-7-18 By (print) TKY (sign) [Signature]

Detections Summary for 300453

Results for any subcontracted analyses are not included in this summary.

JM2 06/08/18 : Sharing CMarker with previous sequence, 12 hour window intact.

JM2 06/08/18 : Partial sequence for 300480.

JM2 06/08/18 : I verified that the vials loaded on the instrument matched the sequence data entry, for runs 1 through 12.

JM2 06/08/18 : 480-007 sample weight and pdf changed, 480-011 has the correct pdf and idf.

LW 06/08/18 : Reviewed through file 11

CJN 06/11/18 : I verified that the vials loaded on the instrument matched the sequence data entry, for runs 13 through 36.

CURTIS & TOMPKINS SEQUENCE SUMMARY FOR 328229496

Instrument : GC07
Method : EPA 8015B, EPA 8021B

Begun : 06/08/18 08:56
SOP Version : TVH_BTXE_rv23

Reviewed by: CJN Date: 06/11/18

Standards used: 1=S36848 2=S37192 3=S36185 4=S36859

CB1 06/12/18 : Matrix spikes were not performed for this analysis in batch 260379 due to insufficient sample amount.

WA1 06/12/18 : Please review NSG QCs for rush 300507 and 300519. SG QCs are still running.

EAH 06/12/18 : Re viewed for 300507 and 300519.

CB1 06/13/18 : Batch paperwork is done and all QC are run, please fully review.

BS/BSD-only (MS/MSD not included) due to: insufficient volume, or other (reason)

surrogate volume adjusted proportionally to sample volume

Checked pH with pH strips - lot #
 0.25/0.5/1.0 mL of TEH_SURR was added to all samples
 * 1.0 mL of TEH_SP was added to all spikes
 3520c: Samples were continually extracted about 450 mL of CH₂Cl₂
 Extraction Start Time: _____
 Extraction End Time: _____
 3510c: Samples were extracted 3 times with 60 mL of CH₂Cl₂
 Extracts filtered through baked, CH₂Cl₂-rinsed granular Na₂SO₄
 Concentrated to final volume in boiling water bath
 Relinquished to TEH Department

MS/MSD not included due to: insufficient volume, or other (reason) _____

Balance ID: B-15 Has been calibrated? Yes No

Baked, solvent-rinsed granular Na₂SO₄ weighed out for QC samples
 Samples were dried with CH₂Cl₂-rinsed powdered Na₂SO₄
1.0 mL of Surrogate solution was added to all samples
1.0 mL of Spike solution was added to all spikes
 1:1 CH₂Cl₂ (lot# EMS8068):Acetone (lot# FC181819) was added to all
 Solvent added at (time) 9:56
 Sonicated 3 times w/ ≥100mL 1:1 DCM:Acetone
 Extracts filtered through baked, rinsed powdered Na₂SO₄
 Concentrated to final volume in boiling H₂O bath
 Relinquished to TEH Department

Mfg & Lot # / LIMS # / Time Date/Initials

Baked, solvent-rinsed granular Na₂SO₄ weighed out for QC samples
 Samples were dried with CH₂Cl₂-rinsed powdered Na₂SO₄
 1.0 mL of Surrogate solution was added to all samples
 1.0 mL of Spike solution was added to all spikes
 1:1 CH₂Cl₂ (lot# EM58068):Acetone (lot# FL181819) was added to all
 Solvent added at (time)
 Sonicated 3 times w/ ≥100mL 1:1 DCM:Acetone
 Extracts filtered through baked, rinsed powdered Na₂SO₄
 Concentrated to final volume in boiling H₂O bath
 Relinquished to TEH Department

CASE NARRATIVE

Laboratory number: 301003
Client: TRC Solutions
Project: 285830.02.01
Location: Riley Avenue
Request Date: 06/25/18
Samples Received: 06/25/18

This data package contains sample and QC results for twenty three soil samples and one water sample, requested for the above referenced project on 06/25/18. See attached cooler receipt form for any sample receipt problems or discrepancies.

TPH-Purgeables and/or BTXE by GC (EPA 8015B and EPA 8021B) Water:

Low recovery was observed for gasoline C7-C12 in the MS for batch 260868; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 260868; this analyte was not detected in the sample at or above the RL.

TB06252018 (lab # 301003-024) was analyzed with more than 1 mL of headspace in the VOA vial.

No other analytical problems were encountered.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Soil:

High response was observed for gasoline C7-C12 in the CCV analyzed 06/29/18 06:03; affected data was qualified with "b".

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 260960; this analyte was not detected in samples at or above the RL.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 260992; this analyte was not detected in samples at or above the RL.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 261058; this analyte was not detected in the sample at or above the RL.

No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):

No analytical problems were encountered.

Moisture (ASTM D2216-98/CLP):

No analytical problems were encountered.

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 301003
 Date Received: 6-25-18

Client: TRC
 Project: Riley Avenue

Section 2: Samples received in a cooler? Yes, how many? 2 No (skip Section 3 below)

If no cooler Sample Temp (°C): _____ using IR Gun # A, or B

Samples received on ice directly from the field. Cooling process had begun

If in cooler: Date Opened 6-25-18 By (print) TKY (sign) TKY

Shipping info (if applicable) _____

Are custody seals present? No, or Yes. If yes, where? on cooler, on samples, on package

Date: _____ How many _____ Signature, Initials, None

Were custody seals intact upon arrival? Yes No N/A

Section 3: **Important : Notify PM if temperature exceeds 6°C or arrive frozen.**

Packing in cooler: (if other, describe) _____

Bubble Wrap, Foam blocks, Bags, None, Cloth material, Cardboard, Styrofoam, Paper towels

Samples received on ice directly from the field. Cooling process had begun

Type of ice used : Wet, Blue/Gel, None Temperature blank(s) included? Yes, No

Temperature measured using Thermometer ID: _____, or IR Gun # A B

Cooler Temp (°C): #1: 4.7, #2: 5.4, #3: _____, #4: _____, #5: _____, #6: _____, #7: _____

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	<input checked="" type="checkbox"/>		
Were Method 5035 sampling containers present?	<input checked="" type="checkbox"/>		
If YES, what time were they transferred to freezer? <u>16:35</u>			
Did all bottles arrive unbroken/unopened?	<input checked="" type="checkbox"/>		
Are there any missing / extra samples?		<input checked="" type="checkbox"/>	
Are samples in the appropriate containers for indicated tests?	<input checked="" type="checkbox"/>		
Are sample labels present, in good condition and complete?	<input checked="" type="checkbox"/>		
Does the container count match the COC?	<input checked="" type="checkbox"/>		
Do the sample labels agree with custody papers?	<input checked="" type="checkbox"/>		
Was sufficient amount of sample sent for tests requested?	<input checked="" type="checkbox"/>		
Did you change the hold time in LIMS for unpreserved VOAs?			<input checked="" type="checkbox"/>
Did you change the hold time in LIMS for preserved terracores?	<input checked="" type="checkbox"/>		
Are bubbles > 6mm absent in VOA samples?		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Was the client contacted concerning this sample delivery?		<input checked="" type="checkbox"/>	
If YES, who was called? _____ By _____ Date: _____			

Section 5:	YES	NO	N/A
Are the samples appropriately preserved? (if N/A, skip the rest of section 5)			<input checked="" type="checkbox"/>
Did you check preservatives for all bottles for each sample?			
Did you document your preservative check?			

pH strip lot# _____, pH strip lot# _____, pH strip lot# _____

Preservative added:

H2SO4 lot# _____ added to samples _____ on/at _____

HCL lot# _____ added to samples _____ on/at _____

HNO3 lot# _____ added to samples _____ on/at _____

NaOH lot# _____ added to samples _____ on/at _____

Section 6:

Explanations/Comments: Sample 24 - 1/1 VOAs arrived containing bubbles

Date Logged in 6-26-18

By (print) TKY (sign) TKY

Date Labeled 6-26-18

By (print) TKY (sign) TKY

Detections Summary for 301003

Results for any subcontracted analyses are not included in this summary.

CB1 04/25/18 : I verified that the vials loaded on the instrument matched the sequence data entry, for runs 1 through 81.

CB1 04/23/18 : Hardware failure (bent syringe) for run at position 4, RR DSL opening CCV.

WA1 04/23/18 : Position 11 was mis-injected.

MS/MSD not included due to: insufficient volume, or other (reason)

Balance ID: B-15 Has been calibrated? Yes No

Mfg & Lot # / LIMS # / Time Date/In

Baked, solvent-rinsed granular Na2SO4 weighed out for QC samples

Samples were dried with CH2Cl2-rinsed powdered Na2SO4

0.5 mL of Surrogate solution was added to all samples

1.0 mL of Spike solution was added to all spikes

1:1 CH2Cl2 (lot# EMS8072):Acetone (lot# HDT967) was added to all

Solvent added at (time)

Sonicated 3 times w/ ≥100mL 1:1 DCM:Acetone

Extracts filtered through baked, rinsed powdered Na2SO4

Concentrated to final volume in boiling H2O bath

Relinquished to TEH Department

CASE NARRATIVE

Laboratory number: 301076
Client: TRC Solutions
Project: 285830.02.01
Location: Riley Avenue
Request Date: 06/26/18
Samples Received: 06/26/18

This data package contains sample and QC results for twenty three soil samples and two water samples, requested for the above referenced project on 06/26/18. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B and EPA 8021B) Water:

Gasoline C7-C12, m,p-xylenes, and o-xylene were detected between the MDL and the RL in the method blank for batch 260950; these analytes were not detected in the sample at or above the RL.

TB06262018 (lab # 301076-024) was analyzed with more than 1 mL of headspace in the VOA vial.

No other analytical problems were encountered.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Soil:

High response was observed for gasoline C7-C12 in the CCV analyzed 06/29/18 19:35; affected data was qualified with "b".

Low recoveries were observed for gasoline C7-C12 in the MS/MSD for batch 261094; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits.

Low recoveries were observed for gasoline C7-C12 in the MS/MSD for batch 261094; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 260993; this analyte was not detected in samples at or above the RL.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 260999; this analyte was not detected in samples at or above the RL.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 261057; this analyte was not detected in samples at or above the RL.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 261094; this analyte was not detected in the sample at or above the RL.

No other analytical problems were encountered.

CASE NARRATIVE

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 301076 Client: TPE
 Date Received: 6-26-18 Project: Riley Avenue

Section 2: Samples received in a cooler? Yes, how many? 2 No (skip Section 3 below)
 If no cooler Sample Temp (°C): _____ using IR Gun # A, or B
 Samples received on ice directly from the field. Cooling process had begun
 If in cooler: Date Opened 6-26-18 By (print) kp (sign) kp
 Shipping Info (if applicable) _____
 Are custody seals present? No, or Yes. If yes, where? on cooler, on samples, on package
 Date: _____ How many _____ Signature, Initials, None
 Were custody seals intact upon arrival? Yes No N/A

Section 3: **Important : Notify PM if temperature exceeds 6°C or arrive frozen.**

Packing in cooler: (if other, describe) _____
 Bubble Wrap, Foam blocks, Bags, None, Cloth material, Cardboard, Styrofoam, Paper towels
 Samples received on ice directly from the field. Cooling process had begun
 Type of ice used: Wet, Blue/Gel, None Temperature blank(s) included? Yes, No
 Temperature measured using Thermometer ID: _____, or IR Gun # A B
 Cooler Temp (°C): #1: 2.0, #2: 5.3, #3: _____, #4: _____, #5: _____, #6: _____, #7: _____

Section 4:

	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	X		
Were Method 5035 sampling containers present?	X		
If YES, what time were they transferred to freezer? <u>12:00</u>			
Did all bottles arrive unbroken/unopened?	X		
Are there any missing / extra samples?		X	
Are samples in the appropriate containers for indicated tests?	X		
Are sample labels present, in good condition and complete?	X		
Does the container count match the COC?	X		
Do the sample labels agree with custody papers?	X		
Was sufficient amount of sample sent for tests requested?	X		
Did you change the hold time in LIMS for unpreserved VOAs?			X
Did you change the hold time in LIMS for preserved terracores?	X		
Are bubbles > 6mm absent in VOA samples?		X	
Was the client contacted concerning this sample delivery?		X	
If YES, who was called? _____ By _____ Date: _____			

Section 5:

	YES	NO	N/A
Are the samples appropriately preserved? (if N/A, skip the rest of section 5)			X
Did you check preservatives for all bottles for each sample?			
Did you document your preservative check?			
pH strip lot# _____, pH strip lot# _____, pH strip lot# _____			
Preservative added:			
<input type="checkbox"/> H2SO4 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HCL lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HNO3 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> NaOH lot# _____ added to samples _____ on/at _____			

Section 6:

Explanations/Comments: Sample 24 - 4 VOAs arrived containing bubbles

Date Logged in 6/27/18 By (print) VS (sign) VS
 Date Labeled 6-27-18 By (print) TPE (sign) TPE

Detections Summary for 301076

Results for any subcontracted analyses are not included in this summary.

Client : TRC Solutions
 Project : 285830.02.01
 Location : Riley Avenue

Client Sample ID : BR11-1GW02[3] Laboratory Sample ID : 301076-001

Analyte	Result	Flags	RL	MDL	Units	Basis	IDF	Method	Prep Method

ANALYTICAL REPORT

TPH-Extractables by GC

Matrix: Water

Total Extractable Hydrocarbons			
Lab #:	301076	Location:	Riley Avenue
Client:	TRC Solutions	Prep:	EPA 3520C
Project#:	285830.02.01	Analysis:	EPA 8015B
Field ID:	BR11-1GW03[3]RB03[5]	Sampled:	06/26/18
Matrix:	Water	Received:	06/26/18
Units:	ug/L	Prepared:	07/02/18
Diln Fac:	1.000	Analyzed:	07/03/18
Batch#:	261052		

Type: SAMPLE Lab ID: 301076-025

Analyte	Result	RL	MDL
Diesel C10-C24	200 Y Z	50	16
Motor Oil C24-C36	100 J Y	300	96
Bunker C C12-C40	660 Y Z	300	

Surrogate	%REC	Limits
o-Terphenyl	101	58-123

Type: BLANK Lab ID: QC938088

Analyte	Result	RL	MDL
Diesel C10-C24	ND	50	16
Motor Oil C24-C36	ND	300	96
Bunker C C12-C40	ND	300	

Surrogate	%REC	Limits
o-Terphenyl	95	58-123

J= Estimated value
 Y= Sample exhibits chromatographic pattern which does not resemble standard
 Z= Sample exhibits unknown single peak or peaks
 ND= Not Detected
 RL= Reporting Limit
 MDL= Method Detection Limit

CB1 04/25/18 : I verified that the vials loaded on the instrument matched the sequence data entry, for runs 1 through 81.

CB1 04/23/18 : Hardware failure (bent syringe) for run at position 4, RR DSL opening CCV.

WA1 04/23/18 : Position 11 was mis-injected.

BS/BSO only (MS/MSD not included) due to: insufficient volume, or other (reason)

Checked pH with pH strips - lot # 108D15261 Date/Initials 7/2/18
0.5 / 1.0 mL of TEH_SURR was added to all samples
1.0 mL of TEH_SP was added to all spikes
 3520c: Samples were continually extracted about 450 mL of CH₂Cl₂
 Extraction Start Time: 1400
 Extraction End Time: 08:05
 3510c: Samples were extracted 3 times with 60 mL of CH₂Cl₂
 Extracts filtered through baked, CH₂Cl₂-rinsed granular Na₂SO₄
 Concentrated to final volume in boiling water bath
 Relinquished to TEH Department

Baked, solvent-rinsed granular Na₂SO₄ weighed out for QC samples
 Samples were dried with CH₂Cl₂-rinsed powdered Na₂SO₄
 0.5 mL of Surrogate solution was added to all samples
 1.0 mL of Spike solution was added to all spikes
 1:1 CH₂Cl₂ (lot# EMS8072):Acetone (lot# FC72 HD196) was added to all
 Solvent added at (time)
 Sonicated 3 times w/ ≥100mL 1:1 DCM:Acetone
 Extracts filtered through baked, rinsed powdered Na₂SO₄
 Concentrated to final volume in boiling H₂O bath
 Relinquished to TEH Department

CASE NARRATIVE

Laboratory number: 301104
Client: TRC Solutions
Project: 285830.02.01
Location: Riley Avenue
Request Date: 06/27/18
Samples Received: 06/27/18

This data package contains sample and QC results for fourteen soil samples, requested for the above referenced project on 06/27/18. See attached cooler receipt form for any sample receipt problems or discrepancies.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 260993; this analyte was not detected in samples at or above the RL.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 261057; this analyte was not detected in samples at or above the RL.

No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):

No analytical problems were encountered.

Moisture (ASTM D2216-98/CLP):

No analytical problems were encountered.

Chain of Custody

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 301104
 Date Received: 6-27-18

Client: TRE
 Project: Riley Avenue

Section 2: Samples received in a cooler? Yes, how many? 1 No (skip Section 3 below)

If no cooler Sample Temp (°C): _____ using IR Gun # A, or B

Samples received on ice directly from the field. Cooling process had begun

If in cooler: Date Opened 6-27-18 By (print) TKY (sign) TKY

Shipping info (if applicable) _____

Are custody seals present? No, or Yes. If yes, where? on cooler, on samples, on package

Date: _____ How many _____ Signature, Initials, None

Were custody seals intact upon arrival? Yes No N/A

Section 3: **Important : Notify PM if temperature exceeds 6°C or arrive frozen.**

Packing in cooler: (if other, describe) _____

Bubble Wrap, Foam blocks, Bags, None, Cloth material, Cardboard, Styrofoam, Paper towels

Samples received on ice directly from the field. Cooling process had begun

Type of ice used: Wet, Blue/Gel, None Temperature blank(s) included? Yes, No

Temperature measured using Thermometer ID: _____, or IR Gun # A B

Cooler Temp (°C): #1: 2.1, #2: _____, #3: _____, #4: _____, #5: _____, #6: _____, #7: _____

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	<input checked="" type="checkbox"/>		
Were Method 5035 sampling containers present?	<input checked="" type="checkbox"/>		
If YES, what time were they transferred to freezer? <u>13:00</u>			
Did all bottles arrive unbroken/unopened?	<input checked="" type="checkbox"/>		
Are there any missing / extra samples?		<input checked="" type="checkbox"/>	
Are samples in the appropriate containers for indicated tests?	<input checked="" type="checkbox"/>		
Are sample labels present, in good condition and complete?	<input checked="" type="checkbox"/>		
Does the container count match the COC?	<input checked="" type="checkbox"/>		
Do the sample labels agree with custody papers?	<input checked="" type="checkbox"/>		
Was sufficient amount of sample sent for tests requested?	<input checked="" type="checkbox"/>		
Did you change the hold time in LIMS for unpreserved VOAs?			<input checked="" type="checkbox"/>
Did you change the hold time in LIMS for preserved terracores?	<input checked="" type="checkbox"/>		
Are bubbles > 6mm absent in VOA samples?			<input checked="" type="checkbox"/>
Was the client contacted concerning this sample delivery?		<input checked="" type="checkbox"/>	
If YES, who was called? _____ By _____ Date: _____			

Section 5: YES NO N/A

Are the samples appropriately preserved? (if N/A, skip the rest of section 5)

Did you check preservatives for all bottles for each sample?

Did you document your preservative check?

pH strip lot# _____, pH strip lot# _____, pH strip lot# _____

Preservative added:

- H2SO4 lot# _____ added to samples _____ on/at _____
- HCL lot# _____ added to samples _____ on/at _____
- HNO3 lot# _____ added to samples _____ on/at _____
- NaOH lot# _____ added to samples _____ on/at _____

Section 6:

Explanations/Comments: _____

Date Logged in 6-27-18 By (print) TKY (sign) TKY
 Date Labeled 6-28-18 By (print) TKY (sign) TKY

Detections Summary for 301104

Results for any subcontracted analyses are not included in this summary.

CB1 04/25/18 : I verified that the vials loaded on the instrument matched the sequence data entry, for runs 1 through 81.

CB1 04/23/18 : Hardware failure (bent syringe) for run at position 4, RR DSL opening CCV.

WA1 04/23/18 : Position 11 was mis-injected.

MS/MSD not included due to: insufficient volume, or other (reason)

Balance ID: B-15 Has been calibrated? Yes No

Mfg & Lot # / LIMS # / Time Date/Initials

Baked, solvent-rinsed granular Na₂SO₄ weighed out for QC samples

Samples were dried with CH₂Cl₂-rinsed powdered Na₂SO₄

0.5 mL of Surrogate solution was added to all samples

1.0 mL of Spike solution was added to all spikes

1:1 CH₂Cl₂ (lot# EM5016):Acetone (lot# FC1617A) was added to all

Solvent added at (time)

Sonicated 3 times w/ ≥100mL 1:1 DCM:Acetone

Extracts filtered through baked, rinsed powdered Na₂SO₄

Concentrated to final volume in boiling H₂O bath

Relinquished to TEH Department

CASE NARRATIVE

Laboratory number: 301146
Client: TRC Solutions
Project: 285830.02.01
Location: Riley Avenue
Request Date: 06/28/18
Samples Received: 06/28/18

This data package contains sample and QC results for thirty one soil samples, requested for the above referenced project on 06/28/18. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):

High surrogate recoveries were observed for bromofluorobenzene (FID) in a number of samples.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 261106; this analyte was not detected in samples at or above the RL.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 261153; this analyte was not detected in samples at or above the RL.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 261155; this analyte was either not detected in samples at or above the RL, or detected at a level at least 10 times that of the blank.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 261200; this analyte was either not detected in samples at or above the RL, or detected at a level at least 10 times that of the blank.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 261244; this analyte was detected in samples at a level at least 10 times that of the blank.

No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):

Matrix spikes QC938517, QC938518 (batch 261170) were not reported because the parent sample required a dilution that would have diluted out the spikes.

Many samples were diluted due to the dark and viscous nature of the sample extracts.

No other analytical problems were encountered.

Moisture (ASTM D2216-98/CLP):

No analytical problems were encountered.

Chain of Custody

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 301146
 Date Received: 6-28-18

Client: TRC
 Project: Riley Avenue

Section 2: Samples received in a cooler? Yes, how many? _____ No (skip Section 3 below)
 If no cooler Sample Temp (°C): _____ using IR Gun # A, or B
 Samples received on ice directly from the field. Cooling process had begun.
 If in cooler: Date Opened 6-28-18 By (print) TKY (sign) TKY
 Shipping info (if applicable) _____
 Are custody seals present? No, or Yes. If yes, where? on cooler, on samples, on package
 Date: _____ How many _____ Signature, Initials, None
 Were custody seals intact upon arrival? Yes No N/A

Section 3: Important : Notify PM if temperature exceeds 6°C or arrive frozen.

Packing in cooler: (if other, describe) _____
 Bubble Wrap, Foam blocks, Bags, None, Cloth material, Cardboard, Styrofoam, Paper towels
 Samples received on ice directly from the field. Cooling process had begun
 Type of ice used : Wet, Blue/Gel, None Temperature blank(s) included? Yes, No
 Temperature measured using Thermometer ID: _____, or IR Gun # A B
 Cooler Temp (°C): #1: 7.3, #2: 2.4, #3: _____, #4: _____, #5: _____, #6: _____, #7: _____

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	<input checked="" type="checkbox"/>		
Were Method 5035 sampling containers present?	<input checked="" type="checkbox"/>		
If YES, what time were they transferred to freezer? <u>14:32</u>			
Did all bottles arrive unbroken/unopened?	<input checked="" type="checkbox"/>		
Are there any missing / extra samples?		<input checked="" type="checkbox"/>	
Are samples in the appropriate containers for indicated tests?	<input checked="" type="checkbox"/>		
Are sample labels present, in good condition and complete?	<input checked="" type="checkbox"/>		
Does the container count match the COC?	<input checked="" type="checkbox"/>		
Do the sample labels agree with custody papers?	<input checked="" type="checkbox"/>		
Was sufficient amount of sample sent for tests requested?	<input checked="" type="checkbox"/>		
Did you change the hold time in LIMS for unpreserved VOAs?			<input checked="" type="checkbox"/>
Did you change the hold time in LIMS for preserved terracores?	<input checked="" type="checkbox"/>		
Are bubbles > 6mm absent in VOA samples?			<input checked="" type="checkbox"/>
Was the client contacted concerning this sample delivery?		<input checked="" type="checkbox"/>	
If YES, who was called? _____ By _____ Date: _____			

Section 5:	YES	NO	N/A
Are the samples appropriately preserved? (if N/A, skip the rest of section 5)			<input checked="" type="checkbox"/>
Did you check preservatives for all bottles for each sample?			
Did you document your preservative check? pH strip lot# _____, pH strip lot# _____, pH strip lot# _____			
Preservative added:			
<input type="checkbox"/> H2SO4 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HCL lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HNO3 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> NaOH lot# _____ added to samples _____ on/at _____			

Section 6:
 Explanations/Comments: _____

Date Logged in 6/29/18 By (print) VS (sign) VS

CB1 04/25/18 : I verified that the vials loaded on the instrument matched the sequence data entry, for runs 1 through 81.

CB1 04/23/18 : Hardware failure (bent syringe) for run at position 4, RR DSL opening CCV.

WA1 04/23/18 : Position 11 was mis-injected.

Balance ID: B-12 Has been calibrated? Yes No

Baked, solvent-rinsed granular Na₂SO₄ weighed out for QC samples
 Samples were dried with CH₂Cl₂-rinsed powdered Na₂SO₄
 0.5 mL of Surrogate solution was added to all samples
 1.0 mL of Spike solution was added to all spikes
 1:1 CH₂Cl₂ (lot# EMS068):Acetone (lot# FC176179) was added to all
 Solvent added at (time) 1510
 Sonicated 3 times w/ ≥100mL 1:1 DCM:Acetone
 Extracts filtered through baked, rinsed powdered Na₂SO₄
 Concentrated to final volume in boiling H₂O bath
 Relinquished to TEH Department

Comment 1: comp of 1225-001 A&B at 25g each, limited sample, very wet, out of hold ok per client
 Comment 2: Prepped 05-JUL-2018 18:42; A/O AS1 for ECI

CB1 07/06/18 : Matrix spikes QC938517, QC938518 (batch 261170) were not reported because the parent sample required a dilution that would have diluted out the spikes.

CASE NARRATIVE
TPH-PURGEABLES AND/OR BTXE BY GC (EPA 8015B AND EPA 8021B)

Laboratory number: 301314
Client: TRC Solutions
Project: 285830.02.01
Location: Riley Avenue
Request Date: 07/06/18
Samples Received: 07/06/18

This data package contains sample and QC results for four water samples, requested for the above referenced project on 07/06/18. See attached cooler receipt form for any sample receipt problems or discrepancies.

TPH-Purgeables and/or BTXE by GC (EPA 8015B and EPA 8021B):

Ethylbenzene and m,p-xylenes were detected between the MDL and the RL in the method blank for batch 261329; these analytes were not detected in samples at or above the RL.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 261354; this analyte was not detected in samples at or above the RL.

TB07062018-01 (lab # 301314-004) was analyzed with more than 1 mL of headspace in the VOA vial.

No other analytical problems were encountered.

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 301314 Client: TRE
 Date Received: 7-6-18 Project: Riley Ave

Section 2: Samples received in a cooler? Yes, how many? 1 No (skip Section 3 below)
 If no cooler Sample Temp (°C): _____ using IR Gun # A, or B
 Samples received on ice directly from the field. Cooling process had begun
 If in cooler: Date Opened 7-6-18 By (print) [Signature] (sign) [Signature]
 Shipping info (if applicable) _____
 Are custody seals present? No, or Yes. If yes, where? on cooler, on samples, on package
 Date: _____ How many _____ Signature, Initials, None
 Were custody seals intact upon arrival? Yes No N/A

Section 3: **Important: Notify PM if temperature exceeds 6°C or arrive frozen.**
 Packing in cooler: (if other, describe) _____
 Bubble Wrap, Foam blocks, Bags, None, Cloth material, Cardboard, Styrofoam, Paper towels
 Samples received on ice directly from the field. Cooling process had begun
 Type of ice used: Wet, Blue/Gel, None Temperature blank(s) included? Yes, No
 Temperature measured using Thermometer ID: _____, or IR Gun # A B
 Cooler Temp (°C): #1: 2.8, #2: _____, #3: _____, #4: _____, #5: _____, #6: _____, #7: _____

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	<input checked="" type="checkbox"/>		
Were Method 5035 sampling containers present?		<input checked="" type="checkbox"/>	
If YES, what time were they transferred to freezer?			
Did all bottles arrive unbroken/unopened?	<input checked="" type="checkbox"/>		
Are there any missing / extra samples?		<input checked="" type="checkbox"/>	
Are samples in the appropriate containers for indicated tests?	<input checked="" type="checkbox"/>		
Are sample labels present, in good condition and complete?	<input checked="" type="checkbox"/>		
Does the container count match the COC?	<input checked="" type="checkbox"/>		
Do the sample labels agree with custody papers?	<input checked="" type="checkbox"/>		
Was sufficient amount of sample sent for tests requested?	<input checked="" type="checkbox"/>		
Did you change the hold time in LIMS for unpreserved VOAs?			<input checked="" type="checkbox"/>
Did you change the hold time in LIMS for preserved terracores?			<input checked="" type="checkbox"/>
Are bubbles > 6mm absent in VOA samples?		<input checked="" type="checkbox"/>	
Was the client contacted concerning this sample delivery?		<input checked="" type="checkbox"/>	
If YES, who was called? _____ By _____ Date: _____			

Section 5: YES NO N/A
 Are the samples appropriately preserved? (if N/A, skip the rest of section 5)
 Did you check preservatives for all bottles for each sample?
 Did you document your preservative check?
 pH strip lot# _____, pH strip lot# _____, pH strip lot# _____
 Preservative added:
 H2SO4 lot# _____ added to samples _____ on/at _____
 HCL lot# _____ added to samples _____ on/at _____
 HNO3 lot# _____ added to samples _____ on/at _____
 NaOH lot# _____ added to samples _____ on/at _____

Section 6:
 Explanations/Comments: 4/1 VOAs arrived with bubbles for sample 4

Date Logged in 7-6-18 By (print) TRE (sign) [Signature]

**CASE NARRATIVE
TPH-EXTRACTABLES BY GC (EPA 8015B)**

Laboratory number: **301314**
Client: **TRC Solutions**
Project: **285830.02.01**
Location: **Riley Avenue**
Request Date: **07/06/18**
Samples Received: **07/06/18**

This data package contains sample and QC results for three water samples, requested for the above referenced project on 07/06/18. See attached cooler receipt form for any sample receipt problems or discrepancies.

TPH-Extractables by GC (EPA 8015B):

Diesel C10-C24 was detected between the MDL and the RL in the method blank for batch 261242; this analyte was either not detected in samples at or above the RL, or detected at a level at least 10 times that of the blank.

No other analytical problems were encountered.

Chain of Custody

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 301314 Client: TRE
 Date Received: 7-6-18 Project: Riley Ave

Section 2: Samples received in a cooler? Yes, how many? 1 No (skip Section 3 below)
 If no cooler Sample Temp (°C): _____ using IR Gun # A, or B
 Samples received on ice directly from the field. Cooling process had begun
 If in cooler: Date Opened 7-6-18 By (print) [Signature] (sign) [Signature]
 Shipping info (if applicable) _____
 Are custody seals present? No, or Yes. If yes, where? on cooler, on samples, on package
 Date: _____ How many _____ Signature, Initials, None
 Were custody seals intact upon arrival? Yes No N/A

Section 3: **Important: Notify PM if temperature exceeds 6°C or arrive frozen.**
 Packing in cooler: (if other, describe) _____
 Bubble Wrap, Foam blocks, Bags, None, Cloth material, Cardboard, Styrofoam, Paper towels
 Samples received on ice directly from the field. Cooling process had begun
 Type of ice used: Wet, Blue/Gel, None Temperature blank(s) included? Yes, No
 Temperature measured using Thermometer ID: _____, or IR Gun # A B
 Cooler Temp (°C): #1: 2.8, #2: _____, #3: _____, #4: _____, #5: _____, #6: _____, #7: _____

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	<input checked="" type="checkbox"/>		
Were Method 5035 sampling containers present?		<input checked="" type="checkbox"/>	
If YES, what time were they transferred to freezer?			
Did all bottles arrive unbroken/unopened?	<input checked="" type="checkbox"/>		
Are there any missing / extra samples?		<input checked="" type="checkbox"/>	
Are samples in the appropriate containers for indicated tests?	<input checked="" type="checkbox"/>		
Are sample labels present, in good condition and complete?	<input checked="" type="checkbox"/>		
Does the container count match the COC?	<input checked="" type="checkbox"/>		
Do the sample labels agree with custody papers?	<input checked="" type="checkbox"/>		
Was sufficient amount of sample sent for tests requested?	<input checked="" type="checkbox"/>		
Did you change the hold time in LIMS for unpreserved VOAs?			<input checked="" type="checkbox"/>
Did you change the hold time in LIMS for preserved terracores?			<input checked="" type="checkbox"/>
Are bubbles > 6mm absent in VOA samples?		<input checked="" type="checkbox"/>	
Was the client contacted concerning this sample delivery?		<input checked="" type="checkbox"/>	
If YES, who was called? _____ By _____ Date: _____			

Section 5:

	YES	NO	N/A
Are the samples appropriately preserved? (if N/A, skip the rest of section 5)			<input checked="" type="checkbox"/>
Did you check preservatives for all bottles for each sample?			
Did you document your preservative check? pH strip lot# _____, pH strip lot# _____, pH strip lot# _____			
Preservative added:			
<input type="checkbox"/> H2SO4 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HCL lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HNO3 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> NaOH lot# _____ added to samples _____ on/at _____			

Section 6:
 Explanations/Comments: 4/1 VOAs arrived with bubbles for sample 4

Date Logged in 7-6-18 By (print) TRE (sign) [Signature]

WA1 07/10/18 : Matrix spikes were not performed for this analysis in batch 261242 due to insufficient sample amount.

WA1 07/10/18 : Please review QCs for rush job 301254 that due on 7/11.

EAH 07/10/18 : Reviewed for 301254.

CB1 07/12/18 : Please review batch paperwork and QCs for RUSH job 301333 due TODAY, 7/12/18.

EAH 07/12/18 : Reviewed for 301333.

CB1 07/12/18 : Please review batch paperwork and QCs for STD TAT job 301314 due today, 7/12/18.

EAH 07/12/18 : Reviewed for 301314.

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 301314 Client: TRE
 Date Received: 7-6-18 Project: Riley Ave

Section 2: Samples received in a cooler? Yes, how many? 1 No (skip Section 3 below)
 If no cooler Sample Temp (°C): _____ using IR Gun # A, or B
 Samples received on ice directly from the field. Cooling process had begun
 If in cooler: Date Opened 7-6-18 By (print) [Signature] (sign) [Signature]
 Shipping info (if applicable) _____
 Are custody seals present? No, or Yes. If yes, where? on cooler, on samples, on package
 Date: _____ How many _____ Signature, Initials, None
 Were custody seals intact upon arrival? Yes No N/A

Section 3: **Important: Notify PM if temperature exceeds 6°C or arrive frozen.**
 Packing in cooler: (if other, describe) _____
 Bubble Wrap, Foam blocks, Bags, None, Cloth material, Cardboard, Styrofoam, Paper towels
 Samples received on ice directly from the field. Cooling process had begun
 Type of ice used: Wet, Blue/Gel, None Temperature blank(s) included? Yes, No
 Temperature measured using Thermometer ID: _____, or IR Gun # A B
 Cooler Temp (°C): #1: 2.8, #2: _____, #3: _____, #4: _____, #5: _____, #6: _____, #7: _____

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	<input checked="" type="checkbox"/>		
Were Method 5035 sampling containers present?		<input checked="" type="checkbox"/>	
If YES, what time were they transferred to freezer?			
Did all bottles arrive unbroken/unopened?	<input checked="" type="checkbox"/>		
Are there any missing / extra samples?		<input checked="" type="checkbox"/>	
Are samples in the appropriate containers for indicated tests?	<input checked="" type="checkbox"/>		
Are sample labels present, in good condition and complete?	<input checked="" type="checkbox"/>		
Does the container count match the COC?	<input checked="" type="checkbox"/>		
Do the sample labels agree with custody papers?	<input checked="" type="checkbox"/>		
Was sufficient amount of sample sent for tests requested?	<input checked="" type="checkbox"/>		
Did you change the hold time in LIMS for unpreserved VOAs?			<input checked="" type="checkbox"/>
Did you change the hold time in LIMS for preserved terracores?			<input checked="" type="checkbox"/>
Are bubbles > 6mm absent in VOA samples?		<input checked="" type="checkbox"/>	
Was the client contacted concerning this sample delivery?		<input checked="" type="checkbox"/>	
If YES, who was called? _____ By _____ Date: _____			

Section 5:

	YES	NO	N/A
Are the samples appropriately preserved? (if N/A, skip the rest of section 5)			<input checked="" type="checkbox"/>
Did you check preservatives for all bottles for each sample?			
Did you document your preservative check? pH strip lot# _____, pH strip lot# _____, pH strip lot# _____			
Preservative added:			
<input type="checkbox"/> H2SO4 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HCL lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> HNO3 lot# _____ added to samples _____ on/at _____			
<input type="checkbox"/> NaOH lot# _____ added to samples _____ on/at _____			

Section 6:
 Explanations/Comments: 4/1 VOAs arrived with bubbles for sample 4

Date Logged in 7-6-18 By (print) TRE (sign) [Signature]
